

will lead to improved understanding of the global biogeochemical processes of ocean acidification and its impact on marine ecosystems. Pursuant to section 12404 of the FOARAM Act, 33 U.S.C. 3703, a National Ocean Acidification Program will be established to lead U.S. coordination of ocean acidification activities between the Federal agencies, and with academic institutions, industry, and other private sector and international partners. A national ocean acidification data management and information exchange program will ensure that ocean acidification information reaches scientists, decision makers, and the public in a timely manner. Finally, the U.S. will join other countries in establishing a robust international research program to address this global challenge.

Overview

The Plan is organized into seven priority themes:

Theme 1—"Monitoring of Ocean Chemistry and Biological Impacts," identifies sampling programs that collect ocean acidification data, and it prioritizes additional monitoring systems necessary for adequate data collection and monitoring.

Theme 2—"Research to Understand Responses to Ocean Acidification," describes the goals and priorities to understand the physiological responses of marine organisms to ocean acidification and its interactions with other stressors, the impacts to marine food webs, and possible approaches to track ecosystem responses.

Theme 3—"Modeling to Predict Changes in the Ocean Carbon Cycle and Impacts on Marine Ecosystems and Organisms," summarizes requirements and recommendations for modeling ocean acidification, and its impacts on marine organisms and ecosystems, including codifying our research understanding and studying the interplay of factors affecting marine ecosystems, thus permitting analysis of the efficacy of adaptation and mitigation strategies.

Theme 4—"Technology Development and Standardization of Measurements," describes goals that ensure the ability to measure all required parameters through technology development and adequate data quality via measurement standardization.

Theme 5—"Assessment of Socioeconomic Impacts and Development of Strategies to Conserve Marine Organisms and Ecosystems," focuses on assessing the socioeconomic impacts of ocean

acidification and developing adaptation and mitigation strategies.

Theme 6—"Education, Outreach, and Engagement Strategy on Ocean Acidification," describes goals for designing and coordinating educational, public outreach, and domestic and international engagement activities, as well as ensuring results and assessments of monitoring and research efforts are accessible to and understandable by all stakeholders.

Theme 7—"Data Management and Integration," discusses the need for effective data management and integration within the context of other international, Federal, State, local and private activities.
