SUPPLEMENTARY INFORMATION:

Aquaculture is the production of finfish, shellfish, algae, plants, and other aquatic organisms (except mammals and birds) for (1) food and other commercial products; (2) wild stock replenishment for commercial or recreational fisheries; (3) rebuilding populations of threatened or endangered species under species recovery and conservation plans; and (4) restoration and conservation of aquatic and marine habitat.

The National Aquaculture Act (Pub. L. 96-362, 94 Stat. 1198, 16 U.S.C. 2801, *et seq.*) and the National Aquaculture Improvement Act (Pub. L. 99-198, 99

Stat. 1641) were passed to promote aquaculture in the Nation by:

1. Declaring a national aquaculture policy to encourage development of aquaculture in the United States,
2. Calling for the establishment and implementation of a national aquaculture development plan, and
3. Encouraging aquaculture activities and programs in both the public and private sectors of the economy that will result in increased aquacultural production, coordination of domestic aquaculture efforts, conservation and enhancement of aquatic resources, and creation of new industries and job opportunities.

The legislation emphasizes the need for government-wide coordination of national activities regarding aquaculture. To this end, it established a federal interagency aquaculture coordinating group within the Office of Science and Technology Policy that operates as the Joint Subcommittee on Aquaculture (JSA).

The JSA prepared an R&D Plan to help shape, focus, and coordinate interagency research and development efforts on the highest-priority strategic goals and crosscutting objectives over 5-10 years that will encourage aquaculture development and uses in the Nation.

The JSA R&D Plan envisions "a globally competitive, technologically appropriate, and diverse aquaculture sector in the United States that meets increasing demand for seafood and products that are affordable and meet high standards for safety, quality, and environmental stewardship, with maximum opportunity for profitability and economic growth. A critical element of this vision is that the aquaculture sector develops in concert with, natural ecosystems that support recreational, fishery, and environmental services needs."

The R&D Plan identifies nine strategic goals:

1. Advance Integration of Aquaculture Development and Environmental Conservation.
2. Employ Genetics to Increase Productivity and Protect Natural Populations.
3. Improve Aquatic Animal Health.
4. Improve Production Efficiency and Well-being.
5. Improve Nutrition and Develop Novel Feeds.
6. Increase Supply of Nutritious, Safe, High-quality Seafood.
7. Introduce Innovative Production Systems.
8. Create Skilled Workforce and Effective Technology Transfer.
9. Integrate Economic and Social Sciences.

Each goal, along with its outcomes, milestones, and performance measures, is described in detail within the R&D Plan.

Dated: July 9, 2012.

Director, Office of Aquaculture, National Oceanic and Atmospheric Administration, National Marine Fisheries Service.

Dated: July 2, 2012.
