k. *Description of Request:* Pursuant to Article 402 of the project license, Pacific Gas and Electric Company (PG&E) is required to request a temporary amendment of flows from the Commission, if the departure from flows lasts for more than two weeks. PG&E is planning to construct a reinforced shotcrete lining in the lower, unlined portion of the Kings River Surge Shaft. This liner is being constructed to address seepage from the slope below the surge chamber, which has increased over the years. In order to make the repairs, PG&E will need to drain the Kings River Tunnel in a controlled manner. This condition will preclude

the delivery of a water supply to maintain the minimum instream flow release at KI-31. It is estimated that the period of no release from the KI-31 could last approximately 11 weeks. The minimum flow requirement below Balch Afterbay Dam (KI-21) of 15 cubic feet per second (cfs) will be met at all times. PG&E will also release an additional 20 cfs at the Balch Afterbay Dam for a total of 35 cfs at the confluence of Dinkey Creek and the Kings River (KI-22). Additional natural flows from Dinkey Creek will provide a combined 20-50 cfs at KI-22.

l. A copy of the application is available for review at the Commission in the Public Reference Room or may be viewed on the Commission's Web site at <http://www.ferc.gov> using the "eLibrary" link.
