Proposed Project

Costs and Cost Savings of Motor Vehicle Injury Prevention: Evidence-Based Policy and Behavioral Interventions—NEW—National Center for Injury Prevention and Control (NCIPC), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

Motor vehicle injuries are the leading cause of death for children, adolescents, and young adults, and a major cause of death for all other ages. In 2009, 33,808 people were killed in crashes in the United States and more than 2.2 million people were injured. Medical costs and productivity losses associated with traffic injuries amounted to more than \$99 billion in 2005; equivalent to about \$500 for each U.S. licensed driver. Due to the magnitude of this injury problem and the availability of evidence-based policies and interventions to prevent it, motor vehicle injury prevention has been designated as one of the CDC's Winnable Battles.

CDC requests OMB approval to support research needed to reduce the number of motor vehicle injuries and fatalities. This project is designed to support state and local communities in making evidence-based resource allocation decisions relating to the implementation of motor vehicle injury prevention policies and programs. This will be done by generating estimates of the cost of implementing a set of evidence-based interventions. By combining these estimates with existing data on the effect of each intervention and cost of motor vehicle injuries, an interactive, user-friendly tool will be
