SUPPLEMENTARY INFORMATION:

I. Abstract

The primary objective of the National Coal Resources Data System (NCRDS) is to advance the understanding of the energy endowment of the United States (U.S.) by gathering and organizing digital geologic information related to coal, coalbed gas, shale gas and other energy resources and related information regarding these resources. These data are needed to support regional or national assessments concerning coal and coal bed gas occurrences. Requesting external cooperation is the best way for NCRDS to collect energy data and perform research and analyses on the characterization of coals and organic-rich shale, and obtain other information (including geophysical or seismic data, sample collection for generation of thermal maturity data) that can be used in solid-fuel resource assessments and related studies.

The USGS will issue a call for proposals to support researchers from State Geological Surveys and associated accredited Universities that can provide geologic data to support the NCRDS and other energy assessment projects being conducted by the Energy Resources Program. Data submitted to NCRDS by external cooperators constitute more than two-thirds of the USGS point-source stratigraphic database (USTRAT) on coal occurrence. In 2012, NCRDS supported 30 projects in 23 States. This program is conducted under various authorities, including 30 U.S.C. 208-1, 42 U.S.C. 15801, and 43 U.S.C. 31 *et seq.* This collection will consist of applications, proposals and reports (annual and final).
