The qualitative research would consist of a set of twelve focus groups with up to 12 individuals in each focus group with different segments of women entrepreneurs. Questions asked during the focus groups would elicit information on motivations and expectations of women entrepreneurs, as well as any self-limiting perceptions that the respondents may hold about their businesses and the potential for growth. The questions will also elicit reactions to messaging that is commonly provided to women through public and private small business service providers to determine which segments of the population are more receptive to the different messages and to identify any new messages that should be deployed.
