

668dd–668ee) (Administration Act), requires us to develop a CCP for each national wildlife refuge. The purpose in developing a CCP is to provide refuge managers with a 15-year strategy for achieving refuge purposes and contributing toward the mission of the National Wildlife Refuge System (NWRS), consistent with sound principles of fish and wildlife management, conservation, legal mandates, and Service policies. In addition to outlining broad management direction on conserving wildlife and their habitats, CCPs identify wildlife-dependent recreational opportunities available to the public, including opportunities for hunting, fishing, wildlife observation and photography, and environmental education and interpretation. We will review and update the CCP at least every 15 years in accordance with the Administration Act.

Each unit of the NWRS was established for specific purposes. We use these purposes as the foundation for developing and prioritizing the management goals and objectives for each refuge within the NWRS mission, and to determine how the public can use each refuge. The planning process is a way for us and the public to evaluate management goals and objectives that will ensure the best possible approach to wildlife, plant, and habitat conservation, while providing for wildlife-dependent recreation opportunities that are compatible with each refuge's establishing purposes and the mission of the NWRS.

Additional Information

The final CCP may be found at <http://www.fws.gov/midwest/planning/GreatLakesIslands/index.html>. The final CCP includes detailed information about the planning process, the refuges, issues, and management alternative selected. The Web site also includes an EA and FONSI, prepared in accordance with the National Environmental Policy Act (NEPA) (43 U.S.C. 4321 et seq.). The EA/FONSI includes discussion of three alternative refuge management options. The Service's selected alternative is reflected in the final CCP. The selected alternative would provide for the growth of the island refuges by up to 14,133 additional acres, and more opportunities for compatible recreational use. A detailed description of objectives and actions included in

this selected alternative is found in chapter 4 of the final CCP.
