Proposed Collection: The National Cancer Institute (NCI) SmokefreeTXT Program Evaluation, 0925-NEW, NEW, National Cancer Institute (NCI), National Institutes of Health (NIH).

Need and Use of Information Collection: This study seeks to assess the efficacy of the SmokefreeTXT program, a text message smoking cessation intervention designed for young adult smokers ages 18 to 29. The SmokefreeTXT program is a component of a larger series of eHealth/mHealth tobacco cessation intervention programs. SmokefreeTXT has been developed (and is managed) by the National Cancer Institute (NCI) Tobacco

Control Research Branch (TCRB) at the request of the Office of the Assistant Secretary for Health (OASH) at the Department of Health and Human Services (DHHS). The study seeks to recruit a large sample of adult smokers to examine how exposure to the SmokefreeTXT intervention affects participants' success at quitting smoking. There will be 3-arms to the study; participants will be enrolled for a maximum of 8 weeks of treatment in the SmokefreeTXT program, with frequency and duration of the treatment varying by study arm. The SmokefreeTXT Study will collect self-reported cessation data using the bidirectional aspect of text-messaging service and a series of web-based surveys. All web-based survey data will be collected and stored by a third-party, Research Triangle Institute International (RTI). Respondents will complete a screener, 5 web-based surveys, and an exit survey for a total of 8,353 annual burden hours. The five surveys include: (1) Pre-treatment baseline survey; (2) one week post quit date questionnaire; (3) end of active cessation treatment questionnaire; (4) 12-week post-treatment questionnaire; (5) 24-weeks post-treatment questionnaire.

OMB approval is requested for 2 years. There are no costs to respondents other than their time. The estimated annualized burden hours are 4,250.
