*Total Annual Burden:* 4,167 hours.

*Total Annual Cost:* N/A.

*Privacy Impact Assessment:* Yes. The Commission has a system of records for this information collection, FCC/WTB-1, "Wireless Services Licensing Records", which covers the personally identifiable information (PII) that individual applicants may include in their submissions for licenses or grants of equipment authorization.

At such time as the Commission revises this System of Records Notice (SORN), the Commission will conduct a Privacy Act Impact Assessment (PIA) and publish the revised SORN in the **Federal Register**. In addition, the Commission will post a copy of both the PIA and the SORN on the FCC's Privacy Web page.

*Nature and Extent of Confidentiality:* There is a need for confidentiality with respect to filers who are individuals in this collection. Pursuant to section 208(b) of the E-Government Act of 2002, 44 U.S.C. 3501, in conformance with the Privacy Act of 1974, 5 U.S.C. 552(a), the Commission's Wireless Telecommunications Bureau instructs licensees to use the FCC's Universal Licensing System (ULS), Antenna Structure Registration (ASR), Commission Registration System (CORES) and related systems and subsystems to submit information.

*Needs and Uses:* The Commission will submit this information collection after this comment period to obtain the full, three year clearance from the Office of Management and Budget (OMB). The Commission is requesting approval for this new information collection.

The Commission adopted a Report and Order (R&O) in FCC 13-21, which implements new technical, operational and registration requirements for signal boosters. The new rules create two classes of signal boosters—consumer and industrial—with distinct regulatory requirements.

*Consumer Signal Boosters* are designed to be used "out of the box" by individuals to improve their wireless coverage within a limited areas such as a home, car, boat, or recreational

vehicle. Consumer Signal Boosters will be authorized under provider licenses subject to certain requirements.

Specifically, subscribers must obtain some form of licensee consent to operate the booster; register the booster with their provider; use a booster that meets the Network Protection Standard and is FCC certificated; and operate the booster on a secondary, non-interference basis and shut it down if it causes harmful interference. Consumers may continue to use existing signal boosters provided they (1) have the consent of their provider; and (2) register the booster with that provider. The Commission will conduct consumer outreach to educate consumers, public safety entities, small businesses, and others about our new regulatory framework.

*Industrial Signal Boosters* include a wide variety of devices that are designed for installation by licensees or qualified installers. These devices are typically designed to serve multiple users simultaneously and cover large areas such as stadiums, airports, office buildings, hospitals, tunnels and educational campuses. Industrial Signal Boosters require a FCC license or express licensee consent to operate, and must be appropriately labeled. The Report and Order also revises technical and operational requirements for duly licensed Part 90 Private Land Mobile Radio (PLMR), non-consumer signal boosters, and adopts a registration requirement for Part 90 Class B signal boosters.

The Commission established a two-step transition process for equipment certification for both Consumer and Industrial Signal Boosters sold and marketed in the United States. First, as of the release date of the R&O, the Commission stopped accepting applications for equipment certifications of Consumer and Industrial Signal Boosters that do not comply with the new rules and ceased certification of devices that do not comply with the new rules. Second, on or after March 1, 2014, all Consumer and Industrial Signal Boosters sold and marketed in the United States must meet the new requirements.

*Total Annual Burden:* 200 hours.

*Total Annual Cost:* \$28,750.

*Privacy Impact Assessment:* Yes. The Commission has a system of records for this information collection, FCC/WTB-1, "Wireless Services Licensing Records", which covers the personally identifiable information (PII) that individual applicants may include in their submissions for licenses or grants of equipment authorization. At such time as the Commission revises this System of Records Notice (SORN), the Commission will conduct a Privacy Act Impact Assessment (PIA) and publish the revised SORN in the **Federal Register**. In addition, the Commission will post a copy of both the PIA and the SORN on the FCC's Privacy Web page.

*Nature and Extent of Confidentiality:* There is a need for confidentiality with respect to filers who are individuals in this collection. Pursuant to section 208(b) of the E-Government Act of 2002, 44 U.S.C. 3501, in conformance with the Privacy Act of 1974, 5 U.S.C. 552(a), the Commission's Wireless Telecommunications Bureau instructs licensees to use the FCC's Universal Licensing System (ULS), Antenna Structure Registration (ASR), Commission Registration System (CORES) and related systems and subsystems to submit information.

*Needs and Uses:* The Commission will submit this information collection after this comment period to obtain the full, three year clearance from the Office of Management and Budget (OMB). The Commission is requesting OMB approval for a new collection.

On March 1 2013, the Commission released a Report and Order, FCC 13-30, which amended its Part 87 rules to authorize new ground station technologies that will promote aviation safety, and allow use of frequency 1090 MHz by aeronautical utility mobile stations for airport surface detection equipment, commonly referred to as vehicle "squitters", to help reduce collisions between aircraft and airport ground vehicles. "Squitter" refers to random output pulses from a transponder caused by ambient noise or by an intentional random triggering system, but not by the interrogation pulses. Further, the Commission establishes service rules for audio visual warning systems to help aircraft in flight

avoid antenna structures and other obstacles, and adopts rules to permit ground testing of aviation data link test systems. However, in this R&O, the Commission declined to authorize remote monitoring of certain automated ground stations.

Section 87.287(b) requires that before submitting an application for an aircraft data link land test station, an applicant must obtain written permission from the licensee of the aeronautical enroute stations serving the areas in which the aircraft data link land test station will operate on a co-channel basis. The Commission may request an applicant to provide documentation as to this fact.

The written permission will aid the Commission in ensuring that licensees are complying with its policies and rules, while allowing the owners of antenna structures and other aviation obstacles to use Audio Visual Warning Systems (AVWS) stations, thereby helping aircraft avoid potential collisions and enhancing aviation safety, without causing harmful interference to other communications.
