II. Further Information

The NRC is issuing for public comment a draft guide in the NRC's "Regulatory Guide" series. This series was developed to describe and make available to the public such information as methods that are acceptable to the NRC staff for implementing specific parts of the NRC's regulations, techniques that the staff uses in evaluating specific problems or postulated accidents, and data that the staff needs in its review of applications for permits and licenses.

The draft regulatory guide entitled "Qualification Tests for Safety-Related Actuators in Nuclear Power Plants" is temporarily identified by its task number, DG-1235. The DG-1235 is proposed Revision 1 of RG 1.73, "Qualification Tests of Electric Valve Operators Installed Inside the Containment of Nuclear Power Plants" dated January 1974. The initial version of RG 1.73, endorsed IEEE Std. 382-1972, "IEEE Trial-Use Guide for Type Test of Class I Electric Valve Operators for Nuclear Power Generating Stations." The IEEE standard was revised in 1985, again in 1996, and, most recently, in 2006. But RG 1.73 was not updated. This revision updates RG 1.73 to endorse the current version of IEEE Std. 382-2006, "Standard for Qualification of Safety-Related Actuators for Nuclear Power Generating Stations."

III. Backfitting and Issue Finality

This draft regulatory guide, if finalized, does not constitute backfitting as defined in 10 50.109 (the Backfit Rule) and is not otherwise inconsistent with the issue finality provisions in 10 CFR Part 52, "Licenses, Certifications and Approvals for Nuclear Power Plants." This regulatory guide provides guidance on one possible means for meeting NRC's regulatory requirements for environmental qualification of safety-related power-operated valve actuators in nuclear power plants as set forth in the regulations and the qualification testing requirements of Criterion III, "Design Control" of Appendix B to 10 CFR Part 50 to verify adequacy of design for service under design basis event conditions. Existing licensees and applicants of final design certification rules will not be required to comply with these new positions set forth in this draft regulatory guide, unless the licensee or design certification rule applicant seeks a

voluntary change to its licensing basis with respect to safety-related power operated valve actuators, and where the NRC determines that the safety review must include consideration of the qualification of the valve actuators. Further information on the staff's use of the draft regulatory guide, if finalized, is contained in the RG under section D. Implementation.

Dated at Rockville, Maryland, this 24th day of April 2013.

For the Nuclear Regulatory Commission,
Thomas H. Boyce,
Chief, Regulatory Guide Development Branch,
Division of Engineering, Office of Nuclear
Regulatory Research.
