SUPPLEMENTARY INFORMATION:

I. Background

A program for regular cleanup and removal of accumulations of coal and float coal dusts, loose coal, and other combustibles is essential to protect miners from explosions. Effective and frequent rock dust application is necessary to protect miners from the potential of a float coal dust explosion or, if one occurs, to reduce its propagation. Rock dust standards were published (35 FR 17097, November 20, 1970) as part of a final rule that implemented requirements contained in the 1969 Federal Coal Mine Health and Safety Act.

Section 75.400-2 requires that mine operators establish and maintain a “program for regular cleanup and removal of accumulations of coal and float coal dusts, loose coal, and other combustibles.” In addition, the cleanup program must be available to the Secretary or authorized representative (AR).

On September 23, 2010, MSHA issued an emergency temporary standard (ETS) on the maintenance of incombustible content of rock dust. The ETS, which became a final rule on June 21, 2011, increased the total incombustible
