Summary of Information Collection

The Air Force (AF) Active, Air National Guard (ANG), and Air Force Reserve Command (AFRC) duty field recruiters have a need for an automated tool to initially build prospective enlistees for all recruiting accessions for Enlisted, Officer, and Health Professions. Air Force Recruiting Information Support System—Total Force (AFRISS—TF) provides a comprehensive integration, interface, and standardization of all programs that manage personnel resources in support of recruiting and collecting personnel private information required to induct into the Armed Forces.

The system extends automated capabilities out to the individual recruiter, flight, squadron, and groups. It provides an automated interface to Military Entrance Processing Center Station (MEPS) where applicants undergo physical, testing, verification interviews, and tentative job reservation that can be entered into AFRISS—TF. It also provides reporting capabilities at all levels of management to make informed decisions on recruiting practices.

DEPARTMENT OF ENERGY

Proposed Subsequent Arrangement

AGENCY: Office of Nonproliferation and International Security, Department of Energy.

ACTION: Proposed Subsequent Arrangement.

SUMMARY: The Department is providing notice of a proposed agreement between the Government of the United States of America and the Government of the Republic of Korea that is being processed as a subsequent arrangement. **DATES:** This subsequent arrangement will take effect no sooner than June 17, 2013.

FOR FURTHER INFORMATION CONTACT: Mr. Sean Oehlbart, Office of Nonproliferation and International Security, National Nuclear Security Administration, Department of Energy.

Telephone: 202-586-3806 or email: Sean.Oehlbart@nnsa.doe.gov.

SUPPLEMENTARY INFORMATION: The agreement being processed as a subsequent arrangement is the proposed Agreement between the Government of the United States of America and the Government of the Republic of Korea Relating to the Transfer of Certain Nuclear Technologies in the Course of the Joint Fuel Cycle Study (the Agreement) being conducted by authorized technical experts from the United States of America and the Republic of Korea (ROK). The Joint Fuel Cycle Study (JFCS) will explore the technical and economic feasibility and the nonproliferation acceptability of the electrochemical recycling process and of other spent fuel management options. The purpose of the Agreement is to establish legal procedures and controls governing the transfer of technologies under the course of the JFCS that are necessary for its successful completion.

The U.S. Government has concluded that electrochemical recycling technology as defined in the Agreement is sensitive nuclear technology (SNT) within the meaning of Section 4(a)(5) of the Nuclear Non-Proliferation Act of 1978 (22 USC 3203(a)(5)), and that the transfer of such technology to the ROK is necessary for the successful completion of the JFCS. Sections 127 and 128 of the Atomic Energy Act of 1954, as amended (AEA), impose certain requirements on the export of SNT. In order to meet those requirements and proceed with the transfer of SNT as part of this cooperation, the U.S. Government must obtain the ROK government's agreement to conditions on the transferred SNT and any nuclear material or equipment produced through its use. The Agreement was explicitly developed to meet the requirements of AEA Sections 127 and 128 regarding the transfer of SNT to the ROK and contains all the terms and conditions required therein.

The Agreement would impose reciprocal obligations on both the U.S. Government and the ROK government regarding all technology transferred under the Agreement, including SNT, except insofar as the Agreement reflects the different obligations of the two governments under their respective safeguards agreements with the International Atomic Energy Agency (IAEA).

Although the Agreement would not be concluded pursuant to an agreement for nuclear cooperation entered into pursuant to Section 123 of the AEA, the results of the collaboration eventually may be applicable to spent nuclear fuel
