

b. For the Regal turn signal lamps, the photometric requirements with the 2.5 multiplier, are met in two of the five zones; and are within 25% of the requirements in two other zones. The Malibu and Regal turn signal lamps provide the required light under normal driving conditions. In the unlikely circumstance that a single bulb stops functioning, the remaining bulb continues to provide the minimum turn signal light specified in the standard and is generally within 25% of the minimum required light after the 2.5 multiplier is applied. In the case of these vehicles, GM's analysis indicates the light provided by the single bulb is perceptible to the motoring public.

GM has additionally informed NHTSA that it has corrected the noncompliance so that all future production vehicles will comply with FMVSS No. 108.

In summation, GM believes that the described noncompliance of its vehicles is inconsequential to motor vehicle safety, and that its petition, to exempt from providing recall notification of noncompliance as required by 49 U.S.C. 30118 and remedying the recall noncompliance as required by 49 U.S.C. 30120 should be granted.

Authority: 49 U.S.C. 30118, 30120; delegations of authority at 49 CFR 1.95 and 501.8.

Director, Office of Vehicle Safety Compliance.
