[Project No. 12714-003]

H2O Holdings, LLC; Notice of Preliminary Permit Application Accepted for Filing and Soliciting Comments, Motions To Intervene, and Competing Applications

On August 14, 2013, H2O Holdings, LLC filed an application for a preliminary permit, pursuant to section 4(f) of the Federal Power Act, proposing to study the feasibility of the Phantom Canyon/South Slope Pumped Storage Project, located on Phantom Creek, near Canon City, in Fremont, Pueblo, and El Paso Counties, Colorado. The project would occupy federal lands administered by the U.S. Bureau of Land Management. The final transmission line corridor is still under evaluation, but portions may occupy federal lands administered by the U.S. Department of the Army. The sole purpose of a preliminary permit, if issued, is to grant the permit holder priority to file a license application during the permit term. A preliminary permit does not authorize the permit holder to perform any land disturbing activities or otherwise enter upon lands or waters owned by others without the owners' express permission.

The proposed South Slope Pumped Storage Project would consist of: (1) An upper power reservoir with a storage capacity of approximately 6,000 acre-feet, retained by a new 180-foot-high, 4,925-foot-long concrete-faced earth embankment; (2) a lower reservoir with a power storage capacity of about 6,400 acre-feet and a reserve capacity for non-project use of about 44,600 acre-feet, retained by building three new dams and a 150-foot long and 24-foot-high saddle dike (dam no. 1 would be 6,635 feet long and 140 feet high, dam no. 2 would be 2,710 feet long and 140 feet

high, and dam no. 3 would be 2,200 feet long and 620 feet high); (3) twin 22-foot-diameter, steel penstocks, each about 7,150 feet long, both bifurcating at the powerhouse; (4) a concrete and steel powerhouse with four 110-megawatt (MW) units, for a total capacity of 440 MW; (5) four welded-steel tailraces connecting the powerhouse units and the lower power reservoir; (6) a 30-mile-long, 230-kilovolt transmission line; (7) a 5-foot-diameter, 5.5-mile-long non-project pipeline to provide water to the lower reservoir from the Lester Atterbury Ditch diversion on the north side of the Arkansas River; and (8) appurtenant facilities. The proposed project would have an average annual generation of 1,194,864 megawatt-hours.
