

*Defense Services Proposed to be Sold:*  
See Attached Annex

(viii) *Date Report Delivered to*  
Congress: 26 September 2013

\* As defined in Section 47(6) of the  
Arms Export Control Act.

#### **POLICY JUSTIFICATION**

*Japan—Airborne Warning and Control*  
*System (AWACS) Mission Computing*  
*Upgrade (MCU)*

The Government of Japan has requested a possible sale of an E-767 Airborne Warning and Control System (AWACS) Mission Computing Upgrade (MCU) that includes 4 Electronic Support Measure (ESM) Systems, 8 AN/UPX-40 Next Generation Identify Friend or Foe (NGIFF), 8 AN/APX-119 IFF Transponder, and 4 KIV-77 Cryptographic Computers. Also included are design and kit production, support and test equipment, provisioning, spare and repair parts, personnel training and training equipment, publications and technical documentation, U.S. Government and contractor engineering and technical support, installation and checkout, and other related elements of program support. The estimated cost is \$950 million.

This proposed sale will contribute to the foreign policy and national security of the United States. Japan is one of the major political and economic powers in East Asia and the Western Pacific and a key ally of the United States in ensuring the peace and stability of this region. The U.S. Government shares bases and facilities in Japan. This proposed sale is consistent with U.S. objectives and the 1960 Treaty of Mutual Cooperation and Security.

The proposed sale will provide Japan with an upgraded AWACS command and control capability. This upgrade will allow Japan's AWACS fleet to be more compatible with the U.S. Air Force AWACS fleet baseline and provide for greater interoperability. Japan will use this enhanced capability to provide for its self-defense.

The proposed sale of this equipment and support will not alter the basic military balance in the region.

The principal contractor will be Boeing Integrated Defense Systems in Seattle, Washington. There are no known offset agreements proposed in connection with this potential sale.

Implementation of this proposed sale will require multiple trips to Japan involving U.S. Government and contractor representatives for modification kit installations, testing, technical reviews/support, and training over a period of eight years.

There will be no adverse impact on U.S. defense readiness as a result of this proposed sale.

Transmittal No. 13-43

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b)(1) Of the Arms Export Control Act

Annex

Item No. vii

#### (vii) *Sensitivity of Technology:*

This sale will involve the release of sensitive technology to Japan.

1. The E-767 AWACS MCU is based on the US AWACS Block 40/45 upgrade. The new mission computing system, with Commercial Off-the-Shelf (COTS) equipment, significantly enhances the surveillance, identification, situational awareness and battle management capabilities of the AWACS. It will also provide on/off-board, multi-source integration that produces "one-target/one-track" automatic track initiation and combat ID, improved data link infrastructure and reduced operator workload.

2. The E-767 AWACS MCU will also add an Electronic Support Measure (ESM) capability using a derivative of the Boeing 737 AEW&C SE-200A System. JASDF will procure a classified emitter database, through a separate FMS case, to support this system. The emitter database is classified up to Secret.

3. The E-767 AWACS MCU will provide IFF Modes 4, 5 and Mode S capabilities with the AN/UPX-40 interrogator or a derivative. The AN/UPX-40 hardware and software will not be classified. Military article KIV-77 encryption device will be used with the AN/UPX-40. The key material will be classified Secret.

4. The E-767 AWACS MCU will improve identification by using a COTS Automatic Identification System (AIS), a VHF transceiver system to automatically track and identify marine vessels. AIS-produced tracks will be associated with the E-767 tracks; not used to update E-767 mission computer produced tracks.

5. The E-767 AWACS MCU will add a COTS Traffic Alert and Collision Avoidance System (TCAS) to the cockpit navigation system. TCAS alerts the pilot to the potential of loss of separation with other aircraft, using air traffic control radar beacon systems and the capabilities of Mode S transponders to coordinate with other TCAS equipped aircraft. In addition, the E-767 AWACS MCU will replace the current military IFF transponder with the AN/APX-119 digital transponder for IFF Modes 4/5/S. The KIV-77 encryption device will be used with the transponder. The key material will be classified Secret.

6. If a technologically advanced adversary were to obtain knowledge of the specific hardware and software elements, the information could be used to develop countermeasures that might reduce weapon system effectiveness or be used in the development of a system with similar or advanced capabilities.

OCT 8 2013

The Honorable John A. Boehner  
Speaker of the House  
U.S. House of Representatives  
Washington, DC 20515

Dear Mr. Speaker:

Pursuant to the reporting requirements of Section 36(b)(1) of the Arms Export Control Act, as amended, we are forwarding herewith Transmittal No. 13-51, concerning the Department of the Army's proposed Letter(s) of Offer and Acceptance to Singapore for defense articles and services estimated to cost \$179 million. After this letter is delivered to your office, we plan to issue a press statement to notify the public of this proposed sale.

Sincerely,

*Richard A. Gerould*  
for J.W. Rixey  
Vice Admiral, USN  
Director

Transmittal No. 13-51

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b)(1) of the Arms Export Control Act, as amended

(i) *Prospective Purchaser:* Government of Singapore

(ii) *Total Estimated Value:*

Major Defense Equipment ..	\$ 99 million
Other .....	\$ 80 million
<b>TOTAL .....</b>	<b>\$ 179 million</b>

(iii) *Description and Quantity or Quantities of Articles or Services under*

*Consideration for Purchase:* 6 AN/TPQ-53 (V) Counterfire Target Acquisition Radar Systems with 120 degree sector scan capability, software support, support equipment, simulator, generators, power units, publications and technical documentation, spare and repair parts, live fire exercise, communication support equipment, tool and test equipment, personnel training and training equipment, U.S. Government and contractor technical and logistic support services, repair and return, Quality Assurance Teams, and

other related elements or program and logistics support.  
(iv) *Military Department:* Army (VPN)  
(v) *Prior Related Cases, if any:* None  
(vi) *Sales Commission, Fee, etc., Paid, Offered, or Agreed to be Paid:* None  
(vii) *Sensitivity of Technology Contained in the Defense Article or Defense Services Proposed to be Sold:* See Attached Annex.  
(viii) *Date Report Delivered to Congress:* 08 Oct 13  
\* As defined in Section 47(6) of the Arms Export Control Act.

**POLICY JUSTIFICATION***Singapore—AN/TPQ-53 Counter fire Acquisition Radar Systems*

The Government of Singapore has requested a possible sale of 6 AN/TPQ-53 (V) Counterfire Target Acquisition Radar Systems with 120 degree sector scan capability, software support, support equipment, simulator, generators, power units, publications and technical documentation, spare and repair parts, live fire exercise, communication support equipment, tool and test equipment, personnel training and training equipment, U.S. Government and contractor technical and logistic support services, repair and return, Quality Assurance Teams, and other related elements or program and logistics support. The estimated cost is \$179 million.

This proposed sale will contribute to the foreign policy and national security of the United States by increasing the ability of the Republic of Singapore to contribute to regional security. Its contributions to counter-piracy and counterterrorism efforts continue to stabilize a critical chokepoint where much of the world's goods and services transit en route to and from the Asia Pacific region. The proposed sale will improve the security of a strategic partner which has been, and continues to be, an important force for political stability and economic progress in the Asia Pacific region.

The Government of Singapore intends to use these radar systems to modernize its armed forces. The purchase of these target acquisition radars will enhance the Singapore Army's foundational defense capability. The radars will reduce the vulnerability of forces to indirect fire attacks and provide them with the information necessary to respond to such attacks. The proposed sale provides the Government of

Singapore with assets vital to protect and deter potential threats. Singapore will have no difficulty absorbing this equipment into its armed forces.

The proposed sale of this equipment and support will not alter the basic military balance in the region.

The principal contractor will be Lockheed Martin Corporation in Syracuse, New York. There are no known offset agreements proposed in connection with the potential sale.

Implementation of this proposed sale will require the U.S. Government and contractor representatives to travel to Singapore for a period of six (6) weeks for equipment deprocessing/fielding, systems checkout and new equipment training.

There will be no adverse impact on U.S. defense readiness as a result of this proposed sale.

Transmittal No. 13-51

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b)(1) of the Arms Export Control Act, as amended

Annex

Item No. vii

*(vii) Sensitivity of Technology:*

1. The AN/TPQ-53(V) Counterfire target acquisition radar is a new generation of counter fire sensor with the flexibility to adapt to targets and changing missions. The solid-state phased array AN/TPQ-53 radar system detects, classifies, tracks and determines the location of enemy indirect fire. This radar system is replacing the aging AN/TPQ-36 and AN/TPQ-37 medium-range radars. The radar is mounted on a 5-ton prime mover and is mobile, maneuverable, fully supportable and easily maintained. The AN/TPQ-53(V) Radar System is Unclassified. There is no sensitive or restricted information contained in the AN/TPQ-53(V) Radar System or software.

2. If a technologically advanced adversary were to obtain knowledge of the specific hardware and software elements, the information could be used to identify ways of countering the detection capabilities of the AN/TPQ-53(V) Radar System or improve the performance of their radar systems. The hardware used in the AN/TPQ-53(V) Radar System is considered mature and available in other industrial nation's comparable performance thresholds.
