NATIONAL TRANSPORTATION SAFETY BOARD

Investigative Hearing

On Wednesday, November 6, 2013, and Thursday, November 7, 2013, the National Transportation Safety Board (NTSB) will convene an investigative hearing to gather additional factual information for the ongoing investigation into two Metro-North Railroad accidents that occurred in May 2013. The NTSB Chairman Deborah A.P. Hersman will preside over the Investigative Hearing.

On Friday, May 17, 2013, at 6:01 p.m. eastern daylight time, eastbound Metro-North Railroad passenger train 1548, (departing Grand Central Station, NY toward New Haven, CT) derailed near milepost 53.3 on track number 4 and was struck by westbound Metro-North Railroad passenger train 1581 (departing New Haven toward Grand Central Station). As a result of the collision, 73 passengers, two engineers, and a conductor were transported to local hospitals with injuries. Metro-North estimated there were about 250 passengers on each train at the time of the accident. Metro-North estimated damage at \$18.5 million.

On Tuesday, May 28, 2013, at 11:57 a.m. eastern daylight time, Metro-North Railroad passenger train 1559, traveling westbound at 70 mph, struck and killed a track foreman working on the Metro-North New Haven Line, Subdivision 7, in West Haven, CT. The accident occurred at milepost 69.58 on main track 1. The track foreman's planned work for the day consisted of relocating rail segments from main track 1 to industrial track 5 between control points 266 and 271 near the West Haven Station using a locomotive crane. There were two rail traffic controllers (RTCs) assigned to Division G, the Division where the track foreman was working: (1) A qualified RTC and (2) a student RTC, who was training under the mentorship of the qualified RTC. The student RTC was receiving on-the-job training and was the RTC who applied the blocking devices for this work crew and issued the working authority, thus taking the track out-of-service.

As a result of the West Haven accident, on June 17, 2013, the Board released an urgent recommendation to Metro-North to require redundant protection, such as shunting, for maintenance-of-way work crews who depend on the train dispatcher to control access to occupied sections of track. A shunt is a device that crews can attach to the rails in a work zone to alert
