SUPPLEMENTARY INFORMATION:

I. Abstract

This request is for a regular submission (new information collection).

NOAA and the U.S. Environmental Protection Agency (EPA) have entered a partnership to estimate the market and non-market economic values of Puerto Rico's coral reef ecosystems. Estimates will be made for all ecosystem services for the Guanica Bay Watershed and for recreation-tourism for all of Puerto Rico's coral reef ecosystems.

We will conduct surveys of visitors to Puerto Rico and residents of Puerto Rico who use the coral reef ecosystems to estimate the amount and type of use, their spending while undertaking coral reef use activities, the economic value of reef attributes (e.g. water clarity/visibility, coral abundance and diversity, fish and invertebrate abundance and diversity, and opportunity to see large wildlife) and how economic value changes with changes in reef attributes.

II. Method of Collection

Visitors to the island will be recruited into an Internet Panel via stratified random sampling at the various access modes of transportation to the island (e.g. airports, cruise ship docks and ferries). The panel recruitment surveys will use a short-form (5 to 10 minutes) to gather information of place of permanent residence, length of stay in Puerto Rico, activities participated in while on their stay, and demographic information. A tally sheet will be used to screen survey participants for coral reef use. This will then allow for connection to air enplanement data,

cruise ship passenger data, and ferry passenger data to estimate the total number of reef users. Those who agree to the Internet Panel will then be asked more detailed questions on intensity of coral reef use (person-days of reef activity by type of activity), spending while doing reef activities, and economic value of reef attributes. For those who do not want to join the Internet Panel, they will be offered mail back surveys to gather the information that would be gathered in the Internet Panels.

Residents of the island will be surveyed face-to-face in the home. Information on activity participation and use of the coral reefs, demographics, and economic value of coral reefs and how those values change with changes in reef attributes will be gathered in the face-to-face in-home surveys. Additional mail backs will be used for importance-satisfaction ratings and spending while recreating on the coral reefs.
