NMFS is specifically interested in comments and information regarding a preferred control rule analyzed in the MSE for ocean salmon fisheries south of Point Arena that is responsive to the abundance of the species. The control rules are described in the MSE report as “management strategies” and are as follows: management strategy 1 allowed for a zero age-3 impact rate, management strategy 2 used a historical impact rate of 25 percent, management strategy 3 used the current era impact rate of 20 percent, and management strategies 4 through 6 required a reduction in impact rates at certain abundance thresholds. The control rule included in the current RPA (referred to as “management strategy SWR” in the Winship *et al.* 2012 addendum, beginning on page 57 of the document at http://www.pcouncil.org/wp-content/uploads/SRWC_MSE_2012_02_28.pdf was also analyzed with results presented in Winship *et al.* 2012 (addendum); we welcome comments on this control rule as well.
