k. This application has been accepted for filing and is now ready for environmental analysis.

l. *Project Description:* The Antrim Micro-Hydropower Project would consist of the following existing features: (1) A 0.25-acre-foot collection pond; (2) a 12-inch-diameter, 435-foot-long polyvinyl chloride (PVC) pipe that conveys raw water from a collection pond to a 60-foot-diameter concrete clarifier with a capacity of 33,500 cubic feet in a treatment plant,¹ (3) a 12-inch-diameter, 143-foot-long high-density polyethylene (HDPE) pipe to convey treated water from the treatment plant to a forebay; (4) a 12-inch-diameter, 155-foot-long HDPE pipe connected to the 12-inch-diameter PVC pipe to bypass raw water to the forebay during high flow conditions or plant maintenance; (5) a forebay with a net storage capacity of 6,000 cubic feet; (6) an 18-inch-diameter, 972-foot-long penstock from the forebay to the powerhouse; (7) a powerhouse with two identical impulse turbine-generator units with a combined rated capacity of 40 kilowatts; (8) a 75-foot-long tailrace to convey flows from the powerhouse to an unnamed tributary to Bridge Run; (9) a 1,300-foot-long, 460-volt buried transmission line; and (10) appurtenant facilities. The project is estimated to generate an average of 250 megawatt-hours annually.

The applicant currently operates one turbine as an off-grid project, and proposes to bring the other turbine (currently in place but non-operational) online by additional indoor wiring within the existing powerhouse and the treatment plant, and operate both turbines as a grid-connected project.

m. Due to the project works already existing and the limited scope of new work described above, the applicant's

close coordination with federal and state agencies during the preparation of the application, and agency comments, we intend to waive scoping and expedite the licensing process. Based on a review of the application, resource agency consultation letters, and agency comments, Commission staff intends to prepare a single environmental assessment (EA). Commission staff determined that the issues that need to be addressed in its EA have been adequately identified during the pre-filing period, and no new issues are likely to be identified through additional scoping. The EA will consider assessing the potential effects of project construction and operation on geology and soils, aquatic, terrestrial, threatened and endangered species, and cultural and historic resources.

n. A copy of the application is available for review at the Commission in the Public Reference Room or may be viewed on the Commission's Web site at <http://www.ferc.gov> using the "eLibrary" link.
