**Notification Regarding Administrative Protective Orders**

This notice also serves as the only reminder to parties subject to administrative protective orders (“APO”) of their responsibility concerning the return or destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305. Timely notification of the return or destruction of APO materials or conversion to judicial protective orders is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

We are issuing and publishing these results and notice in accordance with sections 751(c), 752(c), and 777(i)(1) of the Act and 19 CFR 351.218.

Dated: February 28, 2014.

**University of Minnesota-Twin Cities, et al.; Notice of Consolidated Decision on Applications for Duty-Free Entry of Scientific Instruments**

This is a decision pursuant to Section 6(c) of the Educational, Scientific, and Cultural Materials Importation Act of 1966 (Pub. L. 89-651, as amended by Pub. L. 106-36; 80 Stat. 897; 15 CFR part 301). Related records can be viewed between 8:30 a.m. and 5:00 p.m. in Room 3720, U.S. Department of Commerce, 14th and Constitution Ave. NW., Washington, DC.

*Comments:* None received. Decision: Approved. We know of no instruments of equivalent scientific value to the foreign instruments described below, for such purposes as each is intended to be

used, that was being manufactured in the United States at the time of its order.

Docket Number: 13-034. Applicant: University of Minnesota-Twin Cities, Minneapolis, MN 55455. Instrument: Diode-Pumped Solid-State Femtosecond Laser. Manufacturer: Light Conversion, Lithuania. Intended Use: See notice at 78 FR 64916, October 30, 2013. Comments: None received. Decision: Approved. We know of no instruments of equivalent scientific value to the foreign instruments described below, for such purposes as this is intended to be used, that was being manufactured in the United States at the time of order. Reasons: The instrument will be used to study non-equilibrium materials processes ranging spatially from the atomic-scale up to micrometers and temporally from femtoseconds to seconds, including thermal transport, energy conversion (e.g., light to heat), crystallization, melting, phase transformations, fracture, and other dynamic events. The unique characteristics of the instrument required for the research objectives include a variable repetition rate from single-shot to 1 MHz controlled with TTL input for external triggering or via computer interface, 0.2 mJ/pulse (<30 kHz), 6 Watts at 1 MHz, collinear output from a harmonics module of fundamental (1030 nm), second harmonic (515 nm), and third harmonic (343 nm) with additional optics for operation at low and high repetition rates.

Docket Number: 13-036. Applicant: UChicago Argonne, Lemont, IL 60439. Instrument: High pressure crystal growth furnace with Siemens programmable logic controller. Manufacturer: SCIDRE-Scientific Instruments, Germany. Intended Use: See notice at 78 FR 64916, October 30, 2013. Comments: None received. Decision: Approved. We know of no instruments of equivalent scientific value to the foreign instruments described below, for such purposes as this is intended to be used, that was

being manufactured in the United States at the time of order. Reasons: The instrument will be used to create transition metal oxides, including oxides of iron, manganese, copper, cobalt, vanadium, iridium, ruthenium, rhenium, titanium, nickel, and zinc. It will also be used to grow crystals of intermetallic phases, which are non-oxides of these same transition metals, alloyed with lanthanide metals and/or main group metals (e.g., Al, Si, Bi). These materials will be created to understand a variety of physical phenomena including superconductivity, metal-insulator transitions, and magnetism. With the crystals grown on the instrument, a variety of tests will be performed including magnetic measurements, structural determination by x-ray or neutron scattering, and electrical transport. The unique characteristics of this instrument required for the research objectives include operation at pressures of oxygen or inert gases up to 150 atm, measurement of image zone using pyrometric probes, and cleansing of inert gas stream to better than 10<sup>-12</sup> ppm oxygen with monitoring during process.

Docket Number: 13-037. Applicant: Georgia Health Sciences University, Augusta, GA 30912. Instrument: Imaging System/Digital Microscope and Accessories. Manufacturer: Till Photonics, Germany. Intended Use: See notice at 78 FR 64916, October 30, 2013. Comments: None received. Decision: Approved. We know of no instruments of equivalent scientific value to the foreign instruments described below, for such purposes as this is intended to be used, that was being manufactured in the United States at the time of order. Reasons: The instrument will be used for fluorescence imaging of cellular organelles and calcium flux, photo-activation and photo-bleaching fluorescent proteins to study cellular organelles (mitochondria) and intracellular ion flux. The unique characteristics of the instrument include

fast wavelength change, a dichromotome system, and two different light sources that are incorporated and readily switchable, incorporated into a single unit of a wide field fluorescence microscope.

Dated: March 7, 2014.

#### **South Dakota State University, et al., Notice of Consolidated Decision on Applications for Duty-Free Entry of Scientific Instruments**

This is a decision pursuant to Section 6(c) of the Educational, Scientific, and Cultural Materials Importation Act of 1966 (Pub. L. 89-651, as amended by Pub. L. 106-36; 80 Stat. 897; 15 CFR part 301). Related records can be viewed between 8:30 a.m. and 5:00 p.m. in Room 3720, U.S. Department of Commerce, 14th and Constitution Ave. NW., Washington, DC.

Comments: None received. Decision: Approved. We know of no instruments of equivalent scientific value to the foreign instruments described below, for such purposes as each is intended to be used, that was being manufactured in the United States at the time of its order.

Docket Number: 13-030. Applicant: South Dakota State University, Brookings, SD 57007. Instrument: iMIC Andromeda. Manufacturer: Till Photonics, Germany. Intended Use: See notice at 78 FR 70536, November 26, 2013. Comments: None received. Decision: Approved. We know of no instruments of equivalent scientific value to the foreign instruments described below, for such purposes as this is intended to be used, that was being manufactured in the United States at the time of order. Reasons: The instrument will be used to fluorescently label the macrophage colony stimulating factor (MCSF) and other signaling molecules in live primary bone marrow macrophages (BMMs). This instrument is the only confocal using a single micro lens disk, making it the only spinning disk system available that meets the needs for fast, multi fluorophore and Fluorescence Resonance Energy Transfer experiments over a range of objective lens magnifications. Furthermore, it is the only instrument that can rapidly interchange custom dichroic mirrors, which is essential

for experiments relying on new fluorescent proteins.

Docket Number: 13-043. Applicant: University of Colorado at Boulder, Boulder, CO 80309. Instrument: Cyclic Triaxial Testing Device. Manufacturer: Willie Geotechnik, Germany. Intended Use: See notice at 78 FR 70536-37, November 23, 2013. Comments: None received. Decision: Approved. We know of no instruments of equivalent scientific value to the foreign instruments described below, for such purposes as this is intended to be used, that was being manufactured in the United States at the time of order. Reasons: The instrument will be used to study the response of soils under monotonic static loading compared to 1-D and 2-D cyclic loading, evaluate the influence of load amplitude and frequency content on the response of soils in terms of shear modulus and damping versus strain, and evaluate the influence of soil-content on its dynamic properties. It is critical to have the capability to simulate realistic static and dynamic stress conditions to the soil samples, which is facilitated by the instrument. The key specification in the research that was satisfied by the instrument is the ability to apply cyclic loading at high frequencies (up to about 30Hz) to simulate earthquake loading. The instrument is also capable of testing soil samples larger than 70mm, the pressure system/pressure controller has a resolution of 0.1 KPa which provides greater accuracy, and the load frame capacity for both static and dynamic loading is 25 KN.

## DEPARTMENT OF COMMERCE

### National Oceanic and Atmospheric Administration

**RIN 0648-XC986**

#### **Takes of Marine Mammals Incidental to Specified Activities; Taking Marine Mammals Incidental to Rocky Intertidal Monitoring Surveys on the South Farallon Islands, California**

**AGENCY:** National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

**ACTION:** Notice; withdrawal of an incidental take authorization application.

**SUMMARY:** Notice is hereby given that the National Ocean Service's Office of National Marine Sanctuaries Gulf of the Farallones National Marine Sanctuary (GNFMS) has withdrawn its application for an Incidental Harassment Authorization (IHA). The following action is in relation to a proposed IHA to GNFMS for the take of small numbers of marine mammals, by harassment, incidental to rocky intertidal monitoring work and searching for black abalone, components of the Sanctuary Ecosystem Assessment Surveys.

**ADDRESSES:** A copy of the application, which contains several attachments, including COP's marine mammal mitigation and monitoring plan and Plan of Cooperation, can be viewed on the internet at: <http://www.nmfs.noaa.gov/pr/permits/incidental.htm>.

**FOR FURTHER INFORMATION CONTACT:** Candace Nachman, Office of Protected Resources, NMFS, (301) 427-8401.

**SUPPLEMENTARY INFORMATION:** On September 12, 2013, NMFS received an application from GNFMS for the taking of marine mammals incidental to rocky intertidal monitoring work and searching for black abalone. NMFS determined that the application was adequate and complete on November 14, 2013. The requested IHA was for an authorization to take, by Level B harassment, small numbers of five species of marine mammals incidental to GNFMS' rocky intertidal monitoring work and the search for black abalone in areas previously unexplored for black abalone from January 25 through February 1, 2014. NMFS published a Notice of Proposed IHA, initiating a 30-day public comment period, on November 27, 2013 (78 FR 70921). On January 14, 2014, NMFS accepted notice from GNFMS withdrawing their IHA application for the proposed action. The trip was cancelled due to a lack of funding. Therefore, NMFS did not issue an IHA for the proposed specified activity.
