2. How could APIs ensure that the appropriate individual has provided proper consent to permit the release of privacy-protected data to a third party? How can student data be properly safeguarded to prevent its release and use by third parties without the written consent often required?

3. How might read-only or read-write APIs collect, document, and track individuals' consent to have their information shared with specific third parties?

4. How can personally identifiable information (PII) and other financial information (of students and parents) be safeguarded through the use of APIs?

5. What specific terms of service should be enabled using API keys, which would limit use of APIs to approved users, to ensure that information is not transmitted to or accessed by unauthorized parties?

6. What are the relative privacy-related advantages and disadvantages of using read-only versus read-write APIs for student aid data?

F. Compliance Issues

1. What are the relative compliance-related advantages and disadvantages of using read-only versus read-write APIs for student aid data?

2. How can the Department prevent unauthorized use and the development of unauthorized products from occurring through the potential development of APIs? How might the Department enforce terms of service for API key holders, and prevent abuse and fraud by non-API key holders, if APIs were to be developed and made available?

3. What kind of burden on the Department is associated with enforcing terms and conditions related to APIs?

4. How can the Department best ensure that API key holders follow all statutory and regulatory provisions of accessing federal student aid funds and data through use of third-party products?

5. How could prior consent from the student whom the data is about be provided for release of privacy-protected data to third party entities?

6. How should a legal relationship between the Department and an API developer or any other interested party be structured?

7. How would a legal relationship between the Department and an API

developer or any other interested party affect the Department's current agreements with third-party vendors that operate and maintain the Department's existing systems?

8. What disclosures should be made available to students about what services are freely available in government domains versus those that could be offered at a cost by a third party?

9. If the Department were to use a third-party application to engage with the public on its behalf, how could the Department ensure that the Department follows the protocols of OMB Memorandum 10-23?

G. Policy Issues

1. What benefits to consumers or the Department would be realized by opening what is currently a free and single-point service (e.g., the FAFSA) to other entities, including those who may charge fees for freely-available services and processes? What are the potential unintended consequences?

2. How could the Department ensure that access to title IV, HEA student aid programs truly remains free, even amidst the potential development of third-party apps that may charge a fee for assistance in participating in free government programs, products, and services with or without providing legitimate value-added services?

3. What other policy concerns should the Department consider with regard to the potential development of APIs for higher education data and student aid processes at the Department?

4. How would APIs best interact with other systems already in use in student aid processes (e.g., within States)?

5. How would Department APIs benefit or burden institutions participating in title IV, HEA programs?

6. While the Department continues to enhance and refine its own processes and products (e.g., through improvements to FAFSA or the IDR application process), how would third-party efforts using APIs complement or present challenges to these processes?
