II. Discussion

The NRC issues RISs to communicate with stakeholders on a broad range of regulatory matters. This may include communicating staff technical positions on matters that have not been communicated to or are not broadly understood by the nuclear industry.

The NRC staff has developed draft RIS 2014–XX, “Information on Licensing Applications for Fracture Toughness Requirements for Ferritic Reactor Coolant Pressure Boundary Components”, to provide guidance on the scope and detail of information that should be provided in reactor vessel fracture toughness and associated P–T limits licensing applications to facilitate staff review. The RIS, if issued in final form, would be used by applicants for, and holders of, nuclear power reactor licenses, construction permits, standard design approvals, and manufacturing licenses, and applicants for standard design certifications. The draft RIS explains that these entities should ensure that P–T limits developed in accordance with the requirements of 10 CFR Part 50, Appendix G sufficiently address all ferritic materials of pressure-retaining components of the reactor coolant pressure boundary, including the impact of structural discontinuities and neutron fluence accumulation. The draft RIS is available electronically under ADAMS Accession No. ML13301A188.

Dated at Rockville, Maryland, this 10th day of April 2014.

Sheldon D. Stuchell,

Acting Chief Generic Communications Branch, Division of Policy and Rulemaking, Office of Nuclear Reactor Regulation.
