Your request should state that the NRC does not routinely edit comment submissions to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

II. Discussion

On March 24, 2014, the NRC published a proposed rule revising the acceptance criteria for the ECCS for light-water nuclear power reactors (79 FR 16106). The proposed ECCS acceptance criteria are performance-based, and reflect recent research findings that identified new embrittlement mechanisms for fuel rods with zirconium alloy cladding under loss-of-coolant accident conditions. The proposed rule also addresses two petitions for rulemaking by establishing requirements applicable to all fuel types and cladding materials, and requiring the consideration of crud, oxide deposits, and hydrogen content in zirconium-based alloy fuel cladding. Further, the proposed rule contains a provision that would allow licensees to use an alternative risk-informed approach to evaluate the effects of debris for long-term cooling. The NRC is also seeking public comment on three draft regulatory guides that would support the implementation of the proposed rule.

The public comment period for the proposed rule and associated draft guidance was to have ended on June 9, 2014. The public comment period for information collection aspects of this rule was to have ended on April 23, 2014. Due to requests from members of the public, the NRC has extended the comment periods for the proposed rule, the associated draft guidance, and the information collection aspects until August 21, 2014.

Dated at Rockville, Maryland, this 16th day of April 2014.

For the Nuclear Regulatory Commission.

Annette Vietti-Cook,
Secretary of the Commission.

The Proposal

This action proposes to amend Title
14, Code of Federal Regulations (14
CFR), Part 71 by establishing Class E
airspace extending upward from 700
feet above the surface within a 7-mile
radius of Steele Municipal Airport,
Steele, MO, to accommodate new
standard instrument approach
procedures. Controlled airspace is
needed for the safety and management
of IFR operations at the airport.

Class E airspace areas are published
in Paragraph 6005 of FAA Order
7400.9X, dated August 7, 2013 and
effective September 15, 2013, which is
incorporated by reference in 14 CFR
71.1. The Class E airspace designation
listed in this document would be
published subsequently in the Order.

The FAA has determined that this
proposed regulation only involves an
established body of technical
regulations for which frequent and
routine amendments are necessary to
keep them operationally current. It,
therefore, (1) is not a "significant
regulatory action" under Executive
Order 12866; (2) is not a "significant
rule" under DOT Regulatory Policies
and Procedures (44 FR 11034; February
26, 1979); and (3) does not warrant
preparation of a Regulatory Evaluation
as the anticipated impact is so minimal.
Since this is a routine matter that will
only affect air traffic procedures and air
navigation, it is certified that this rule,
when promulgated, will not have a
significant economic impact on a
substantial number of small entities
