

scheme, could allow market participants greater control over the execution of their orders. Specifically, the proposal may help market participants avoid having orders cancelled as a result of a narrow one-MPV price protection limit, particularly in instances when the order's limit price expresses a willingness to trade more than one MPV away from the NBBO that prevailed at the time the order was received. The Commission notes, however, that such a result may still occur under the proposal, when either the default one-MPV price protection limit applies as a result of the member not providing customized instructions, or when a custom price protection limit sits between an order's limit price and the NBBO at the time the order is received. The Commission notes further that, in order to accommodate the amended price protection functionality, the proposal will allow orders to trigger pauses at multiple successive price points, either through the Route Timer or Liquidity Refresh mechanisms.

In addition to providing market participants greater control over the execution of their orders, the Commission believes that the proposal also could facilitate more order interaction. By allowing orders to execute at multiple price points, up or down to their price protection limit or limit price, and to route to away markets at multiple price points, the proposal will allow market participants to interact with greater liquidity both on MIAX and on away markets and increase the opportunity for their orders to receive an execution. Importantly, as is the case under the current price protection functionality, the Commission notes that under the revised process, MIAX will not execute incoming orders at prices inferior to the then-current NBBO.

The Commission believes that the change regarding terminating a Liquidity Refresh Pause when a new quote or order is received during a Liquidity Refresh Pause on the same side of the market as the initiating orders' remaining contracts that locks or crosses the original NBBO is consistent with the Act. The Commission notes that terminating the pause in such a situation allows the displayed opposite side of the MBBO to receive an immediate execution. Further, the Commission notes that, as under the current MIAX rules, orders will then be processed in the order in which they were received.

Finally, the Commission believes that the proposed change to permit immediate routing in an additional situation (*i.e.*, for Public Customer

orders resting on the book when an incoming Public Customer order has initiated a Route Mechanism) will benefit Public Customers by providing such orders with greater access to marketable away liquidity and will allow such orders more promptly to receive an execution instead of being restricted from immediately routing away. As the Commission noted in its approval of MIAX's application for registration as a national securities exchange, pursuant to MIAX's immediate routing process in Rule 529, orders have to meet a number of criteria to be eligible for immediate routing, and as such, many, if not most, orders are likely subject to the one second Route Timer, rather than immediately routing to an away exchange displaying the NBBO.<sup>19</sup> While MIAX is not specifically required to route to away markets, the Commission believes that providing an additional opportunity for immediate routing should be beneficial to Public Customer orders.

#### IV. Conclusion

*It is therefore ordered*, pursuant to Section 19(b)(2) of the Act<sup>20</sup> that the proposed rule change (SR-MIAX-2014-08), is approved.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.<sup>21</sup>
