

(FEMA-4170-DR), dated April 10, 2014, and related determinations.

DATES: *Effective Date:* April 10, 2014.

FOR FURTHER INFORMATION CONTACT: Dean Webster, Office of Response and Recovery, Federal Emergency Management Agency, 500 C Street SW., Washington, DC 20472, (202) 646-2833.

SUPPLEMENTARY INFORMATION: Notice is hereby given that, in a letter dated April 10, 2014, the President issued a major disaster declaration under the authority of the Robert T. Stafford Disaster Relief and Emergency Assistance Act, 42 U.S.C. 5121 *et seq.* (the “Stafford Act”), as follows:

I have determined that the damage in certain areas of the State of Maryland resulting from a snowstorm during the period of February 12–13, 2014, is of sufficient severity and magnitude to warrant a major disaster declaration under the Robert T. Stafford Disaster Relief and Emergency Assistance Act, 42 U.S.C. 5121 *et seq.* (the “Stafford Act”). Therefore, I declare that such a major disaster exists in the State of Maryland.

In order to provide Federal assistance, you are hereby authorized to allocate from funds available for these purposes such amounts as you find necessary for Federal disaster assistance and administrative expenses.

You are authorized to provide emergency protective measures (Category B) under the Public Assistance program in the designated areas and Hazard Mitigation throughout the State. You are further authorized to provide snow assistance under the Public Assistance program for a limited time during or proximate to the incident period.

Consistent with the requirement that Federal assistance be supplemental, any Federal funds provided under the Stafford Act for Hazard Mitigation will be limited to 75 percent of the total eligible costs. Federal funds provided under the Stafford Act for Public Assistance also will be limited to 75 percent of the total eligible costs, with the exception of projects that meet the eligibility criteria for a higher Federal cost-sharing percentage under the Public Assistance Alternative Procedures Pilot Program for Debris Removal implemented pursuant to Section 428 of the Stafford Act.

Further, you are authorized to make changes to this declaration for the approved assistance to the extent allowable under the Stafford Act.

The Federal Emergency Management Agency (FEMA) hereby gives notice that pursuant to the authority vested in the Administrator, under Executive Order 12148, as amended, Steven S. Ward, of FEMA is appointed to act as the Federal Coordinating Officer for this major disaster.

The following areas of the State of Maryland have been designated as adversely affected by this major disaster:

Baltimore, Carroll, and Howard Counties for emergency protective measures (Category B), under the Public Assistance program.

Baltimore, Carroll, and Howard Counties for snow assistance under the Public Assistance program for any continuous 48-hour period during or proximate the incident period.

All counties within the State of Maryland are eligible to apply for assistance under the Hazard Mitigation Grant Program.

The following Catalog of Federal Domestic Assistance Numbers (CFDA) are to be used for reporting and drawing funds: 97.030, Community Disaster Loans; 97.031, Cora Brown Fund; 97.032, Crisis Counseling; 97.033, Disaster Legal Services; 97.034, Disaster Unemployment Assistance (DUA); 97.046, Fire Management Assistance Grant; 97.048, Disaster Housing Assistance to Individuals and Households In Presidentially Declared Disaster Areas; 97.049, Presidentially Declared Disaster Assistance—Disaster Housing Operations for Individuals and Households; 97.050, Presidentially Declared Disaster Assistance to Individuals and Households—Other Needs; 97.036, Disaster Grants—Public Assistance (Presidentially Declared Disasters); 97.039, Hazard Mitigation Grant.

W. Craig Fugate,

Administrator, Federal Emergency Management Agency.

DEPARTMENT OF HOMELAND SECURITY

Transportation Security Administration

Intent To Request Approval From OMB of One Public Collection of Information: Exercise Information System

AGENCY: Transportation Security Administration, DHS.

ACTION: 60-day Notice.

SUMMARY: The Transportation Security Administration (TSA) invites public comment on one currently approved Information Collection Request (ICR), Office of Management and Budget (OMB) control number 1652-0057, abstracted below that we will submit to the Office of Management and Budget (OMB) for renewal in compliance with the Paperwork Reduction Act (PRA). The ICR describes the nature of the information collection and its expected burden for the TSA Exercise Information System (EXIS). EXIS is a web portal designed to serve stakeholders in the transportation industry in regard to security training exercises. EXIS provides stakeholders with transportation security exercise scenarios and objectives, best practices and lessons learned, and a repository of the user’s own historical exercise data for use in future exercises. It also allows stakeholders to design their own

security exercises based on the unique needs of their specific transportation mode or method of operation. Utilizing and inputting information into EXIS is completely voluntary.

DATES: Send your comments by June 30, 2014.

ADDRESSES: Comments may be emailed to TSAPRA@dhs.gov or delivered to the TSA PRA Officer, Office of Information Technology (OIT), TSA-11, Transportation Security Administration, 601 South 12th Street, Arlington, VA 20598-6011.

FOR FURTHER INFORMATION CONTACT: Christina Walsh at the above address, or by telephone 571-227-2062.

SUPPLEMENTARY INFORMATION:

Comments Invited

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The ICR documentation is available at www.reginfo.gov. Therefore, in preparation for OMB review and approval of the following information collection, TSA is soliciting comments to—

(1) Evaluate whether the proposed information requirement is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency’s estimate of the burden;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including using appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Information Collection Requirement

Purpose of Data Collection

The Exercise Information System (EXIS) is an Internet-accessible knowledge-management system developed by TSA to serve its relevant stakeholders (such as members of the transportation industry, port authorities, Federal agencies, and state and local governments). EXIS integrates security-related training and exercise components constituting Sensitive Security Information.¹ It gives

¹ Sensitive Security Information (SSI) is information which, if publicly released, would be detrimental to transportation security, and is defined at 49 U.S.C. 114(r) and 49 CFR part 1520.

stakeholders valuable security exercise scenarios and objectives, best practices and lessons learned, and a repository of the users' own historical exercise data for use in future exercises.

Transportation industry stakeholders can choose scenarios and objectives based on their vulnerabilities, mode of transportation, and the size of their operation.

As a knowledge management system, EXIS provides end-to-end security exercise support from the initial planning meeting through exercise design, implementation, evaluation, and reporting. Working in a secure online environment, with a username and password, EXIS users can easily:

- Customize exercise design: Develop objectives, scenarios, contingency injects, evaluation metrics, and other data sets.
- Conduct robust analyses: Sort evaluation data by exercise objectives, transportation modes, scenario types, or functional areas.
- Create analytical reports: Identify and sort lessons learned, corrective actions, and best practices from past exercises or from those of other jurisdictions.

- Collaborate and share information: Build relationships with partners.

EXIS was developed by TSA as part of its broad responsibilities and authorities under the Aviation and Transportation Security Act (ATSA),² and delegated authority from the Secretary of Homeland Security, for "security in all modes of transportation . . . including security responsibilities . . . over modes of transportation that are exercised by the Department of Transportation."³ EXIS is a component of TSA's Intermodal Security Training Exercise Program (I-STEP), which works with surface transportation stakeholders in developing and conducting security exercises. I-STEP also fulfills requirements of the 9/11 Commission Act of 2007 (9/11 Act)⁴ regarding the establishment of security training exercises for surface modes of transportation that can assess and improve the capabilities of these modes in preventing, preparing for, mitigating against, responding to, and recovering from acts of terrorism.⁵

² Public Law 107-71 (115 Stat. 597, Nov. 19, 2001).

³ See 49 U.S.C. 114 (d).

⁴ Public Law 110-53 (121 Stat. 266, Aug. 3, 2007).

⁵ 9/11 Act secs. 1407 (codified at 6 U.S.C. 1136(a)), 1516 (codified at 6 U.S.C. 1166), and 1533 (codified at 6 U.S.C. 1183). See also the Security and Accountability For Every Port Act of 2006 (SAFE Port Act), Public Law 109-347 (120 Stat. 1884, Oct. 13, 2006) (codified at 6 U.S.C. 911 (a)).

EXIS helps users design an exercise through the use of a "wizard" (an interface that leads the user through a series of steps to help them work through an otherwise potentially complex process). The EXIS wizard walks the user through a step-by-step process allowing them to build a profile for their exercise. EXIS provides users with suggested scenarios based on the area of focus and objectives selected by the user. Users also have the ability to create custom injects or modify a Generic EXIS Community Scenario. Exercise Administrators, who are TSA employees within the Program Office, may suggest modified scenarios and custom injects for use in exercise design.

Once the user has worked through all the steps guided by the wizard, EXIS generates a collaborative workspace for exercise team members to work within. All exercise elements can be customized and saved. Lessons learned, best management practices, and corrective actions are pre-populated into the workspace based on the scenario and objectives of the exercise determined during its creation. EXIS is adaptable to changing exercise, tracking, and reporting needs as they mature and can support the addition of future exercise elements.

By linking "exercise communities," users can also tackle cross-jurisdictional issues, such as interoperability. Users are able to focus on the underlying issues of transportation security and preparedness, and avoid repeating costly mistakes. Finally, users can also provide feedback on the usefulness of EXIS itself so that TSA may improve this system to better suit the stakeholders' future security needs.

TSA intends EXIS to be used primarily by individuals with security responsibilities, such as heads of security, for public and private owner/operators in the surface transportation community, including mass transit systems, freight/rail operators, highway/trucking companies, school bus operators, and pipeline systems. These individuals, and other stakeholders, can voluntarily contact TSA to request access to EXIS; TSA does not require participation in EXIS. Those seeking access or desiring more information about I-STEP products and services can contact a TSA modal representative or send their request by email to ISTEP@dhs.gov.

Description of Data Collection

TSA will collect five types of information through EXIS. The collection is voluntary. EXIS users are not required to provide all information

requested—however, if users choose to withhold information, they will not receive the benefits of EXIS associated with that information collection.

1. *User registration information.* Because EXIS includes SSI information, TSA must collect information upon registration to ensure only those members of the transportation community with a relevant interest in conducting security training exercises and with an appropriate level of need to access security training information are provided access to EXIS. Such registration information will include the user's name, professional contact information, agency/company, job title, employer, and employment verification contact information.

2. *Desired nature and scope of the exercise.* TSA will collect this information to generate an EXIS training exercise appropriate for the particular user. Users are asked to submit their desired transportation mode, exercise properties, objectives, scenario events, and participating agencies.

3. *Corrective actions/lessons learned/best practices.* TSA collects this information to document and share the users' ideas and methods for improving transportation security with other transportation stakeholders. The user has the option to suggest that their lesson(s) learned, best practice(s), or corrective action(s) be published to the wider EXIS user base. The I-STEP team sends the item to Subject Matter Experts within TSA for vetting and validation. Once the information is validated, any company or user identifying information is removed and the content is published to the site for all users to access.

4. *Evaluation feedback.* TSA collects this information for the purpose of evaluating the usefulness of EXIS in facilitating security training exercises for the users. TSA can then modify EXIS to better suit its users' needs.

5. *After-Action Reports.* The EXIS automatically summarizes information from items (2) and (3) mentioned above in order to create formal After-Action Reports (AAR) for users. These AARs include an exercise overview, goals and objectives, scenario event synopsis, analysis of critical issues, exercise design characteristics, conclusions, and the executive summary. The AAR is the output of the exercise process. Stakeholders use the report to identify areas in which they can assign resources to mitigate risk and enhance the security posture within their organization.

Use of Results

TSA will use this information to assess and improve the capabilities of

all surface transportation modes to prevent, prepare for, mitigate against, respond to, and recover from transportation security incidents. A failure to collect this information will limit TSA's ability to effectively test security countermeasures, security plans, and the ability of a modal operator to respond to and quickly recover after a transportation security incident. Insufficient awareness, prevention, response, and recovery to a transportation security incident will result in increased vulnerability of the U.S. transportation network and a reduced ability of DHS to assess system readiness.

Based on industry population estimates and growth rates, and interest generated amongst the surface transportation modes during the first three years following EXIS' release to the public, TSA estimates that there will be approximately 12,998 users for the next three years (4,034 users in Year 1, 4,278 users in Year 2, and 4,686 users in Year 3.) This was calculated by first estimating the future EXIS population using the current number of users (364) and its rate of growth per year (67 percent), in addition to the number of annual users added through outreach events (3,670). To determine the exercise response rate, the average number of exercises conducted annually was calculated based on the number of exercises built per user (roughly one in three users conducted an exercise). TSA calculated that 35 percent of users conduct one exercise per year. Thus, the estimated average number of exercises conducted per year totals 1,517 (12,998 users * .35/3 years). TSA estimates users will spend approximately 4 hours per EXIS exercise inputting the information. Finally, the average number of annual exercises conducted was multiplied by four hours (the amount of time users spent building each exercise) to determine the average annual hourly burden. Given this information, the total annual hourly burden for EXIS's collection of information is 6,068 hours (1,517 users * 4 hours). There are no fees to use EXIS. The total annual cost burden to respondents is \$0.00.

Dated: April 25, 2014.

Christina Walsh,

TSA Paperwork Reduction Act Officer, Office of Information Technology.

DEPARTMENT OF HOMELAND SECURITY

U.S. Customs and Border Protection

Modification of National Customs Automation Program (NCAP) Test Concerning Automated Commercial Environment (ACE) Cargo Release To Allow Importers and Brokers To Certify From ACE Entry Summary

AGENCY: U.S. Customs and Border Protection, Department of Homeland Security.

ACTION: General notice.

SUMMARY: This document announces U.S. Customs and Border Protection's (CBP's) plan to modify the National Customs Automation Program (NCAP) test concerning Cargo Release functionality in the Automated Commercial Environment (ACE) by allowing importers and customs brokers to now certify from ACE Entry Summary cargo transported by air, ocean or rail during the Ace Cargo Release test. Originally, the test was known as the Simplified Entry Test because the test simplified the entry process by reducing the number of data elements required to obtain release for cargo transported by air. The test was subsequently modified to provide more capabilities to test participants, allowing CBP to deliver enhanced functionality and to include expansion to the ocean, rail and truck modes of transportation. This notice invites more participants to join the test.

DATES: The ACE Cargo Release test modifications set forth in this document are effective no earlier than April 6, 2014. The test will run until approximately November 1, 2015.

ADDRESSES: Comments or questions concerning this notice and indication of interest in participation in ACE Cargo Release should be submitted, via email, to Susan Maskell at susan.c.maskell@cbp.dhs.gov. In the subject line of your email, please use, "Comment on ACE Cargo Release Certify from Summary". The body of the email should include information regarding the identity of the ports where filings are likely to occur.

FOR FURTHER INFORMATION CONTACT: For policy related questions, contact Stephen Hilsen, Director, Business Transformation, ACE Business Office, Office of International Trade, at stephen.r.hilsen@cbp.dhs.gov. For technical questions, contact Susan Maskell, Client Representative Branch, ACE Business Office, Office of International Trade, at susan.c.maskell@cbp.dhs.gov.

SUPPLEMENTARY INFORMATION:

Background

I. The National Customs Automation Program

The National Customs Automation Program (NCAP) was established in Subtitle B of Title VI—Customs Modernization in the North American Free Trade Agreement Implementation Act (Pub. L. 103-182, 107 Stat. 2057, 2170, December 8, 1993) (Customs Modernization Act). See 19 U.S.C. 1411. Through NCAP, the initial thrust of customs modernization was on trade compliance and the development of the Automated Commercial Environment (ACE), the planned successor to the Automated Commercial System (ACS). ACE is an automated and electronic system for commercial trade processing which is intended to streamline business processes, facilitate growth in trade, ensure cargo security, and foster participation in global commerce, while ensuring compliance with U.S. laws and regulations and reducing costs for U.S. Customs and Border Protection (CBP) and all of its communities of interest. The ability to meet these objectives depends on successfully modernizing CBP's business functions and the information technology that supports those functions.

CBP's modernization efforts are accomplished through phased releases of ACE component functionality designed to replace a specific legacy ACS function. Each release will begin with a test and, if the test is successful, will end with implementation of the functionality through the promulgation of regulations governing the new ACE feature and the retirement of the legacy ACS function.

The ACE Cargo Release test was previously known as the Simplified Entry Test because the test simplified the entry process by reducing the number of data elements required to obtain release for cargo transported by air. The original test notice required participants to be a member of the Customs-Trade Partnership Against Terrorism (C-TPAT) program. Through phased releases of ACE component functionality this test has been expanded to allow all eligible participants to join the test for an indefinite period regardless of the C-TPAT status of an importer self-filer or a customs broker.

For the convenience of the public, a chronological listing of **Federal Register** publications detailing ACE test developments is set forth below in *Section VIII*, entitled, "Development of ACE Prototypes." The procedures and criteria applicable to participation in the prior ACE tests remain in effect unless
