

- EIA is also proposing a new data element, Net Withdrawals of Working Gas into and out of Storage, which will be reported as weekly withdrawals of working gas in excess of injections. This new element will directly collect the net flow of working gas into or out of storage inventory on a weekly basis, a statistic of great interest by the natural gas industry. Currently, the Weekly Natural Gas Storage Report reports a proxy for weekly net withdrawals by calculating the net change of working gas levels from week to week. However, collecting the net flow or Net Withdrawals of Working Gas into and out of Storage will make weekly movements explicit instead of derived by the difference between inventory levels. Further, direct collection of the weekly net flow into or out of working gas inventories will supplement the information on working gas inventories currently collected by making a clearer distinction between net flows and reclassifications between base and working gas.

- Finally, EIA is proposing two changes to its current Weekly Natural Gas Storage Report *revision policy*. The first proposed change would reduce the threshold for published revisions from 7 billion cubic feet (Bcf) to 4 Bcf. Under the proposed revision policy, revisions will be announced in the regularly scheduled release, when the sum of reported changes is at least 4 Bcf at either a regional or national level. Second, EIA is also proposing to amend the policy addressing the unscheduled release of revisions. Under the current policy, an unscheduled release of revised data will occur when the cumulative effect of respondent submitted data changes or corrections is at least 10 Bcf for the current or prior report week. Under the proposed policy, the unscheduled release of revisions to weekly estimates of working gas held in underground storage will occur when the cumulative sum of data changes or corrections to working gas and the net change between the two most recent report weeks is at least 10 Bcf. The proposed change leaves the 10-Bcf threshold, as well as the current out-of-cycle release procedures intact but will further require that the revision have an impact of 10 Bcf or more on the reported net change between the two most recent reports weeks. For example, if one or more respondents submits changes totaling 10 Bcf to previously submitted data but the changes are the result of errors that have been accumulating over several weeks and do not affect flows of working natural gas into or out of storage in the most recent two reported

weekly periods by more than 10 Bcf, the unscheduled data release will not occur and the revisions will be published with the next regularly scheduled release.

(3) *Estimated Number of Survey Respondents*: There are approximately 85 respondents every week.

(4) *Annual Estimated Number of Total Responses*: The annual estimated number of total responses is 4,420.

(5) *Annual Estimated Number of Burden Hours*: The annual estimated burden is 4,420 hours.

(6) *Annual Estimated Reporting and Recordkeeping Cost Burden*: Additional costs to respondents are not anticipated beyond costs associated with response burden hours.

**Authority**: Section 13(b) of the Federal Energy Administration Act of 1974, Pub. L. 93-275, codified at 15 U.S.C. 772(b).

Issued in Washington, DC, on May 2, 2014.
