New Jersey Avenue SE., West Building, Room W43–443, Washington, DC 20590. Ms. Mazyck's telephone number is (202–366–4139).

SUPPLEMENTARY INFORMATION:

National Highway Traffic Safety Administration

Title: 49 CFR Part 583-Automobile Parts Content Labeling.

OMB Number: 2127–0573. Type of Request: Request for public comment on a previously approved collection of information.

Abstract: Part 583 establishes requirements for the disclosure of information relating to the countries of origin of the equipment of new passenger motor vehicles. This information will be used by NHTSA to determine whether manufacturers are complying with the American Automobile Labeling Act (49 U.S.C. 32304). The American Automobile Labeling Act requires all new passenger motor vehicles (including passenger cars, certain small buses, all light trucks and multipurpose passenger vehicles with a gross vehicle weight rating of 8,500 pounds or less), to bear labels providing information about domestic and foreign content of their equipment. With the affixed label on the new passenger motor vehicles, it serves as an aid to potential purchasers in the selection of new passenger motor vehicles by providing them with information about the value of the U.S./ Canadian and foreign parts of each vehicle, the countries of origin of the engine and transmission, and the site of the vehicle's final assembly.

NHTSA anticipates approximately 21 vehicle manufacturers will be affected by these reporting requirements. NHTSA does not believe that any of these 21 manufacturers are a small business (i.e., one that employs less than 500 persons) since each manufacturer employs more than 500 persons. Manufacturers of new passenger motor vehicles, including passenger cars, certain small buses, and light trucks with a gross vehicle weight rating of 8,500 pounds or less, must file a report annually.

Affected Public: Vehicle manufacturers.

Estimated Total Annual Burden: NHTSA estimates that the vehicle manufacturers will incur a total annual reporting hour and cost burden of 52,962 hours and \$2,439,108 respectively. The amount includes annual burden hours incurred by multistage manufacturers and motor vehicle equipment suppliers. We estimate that the annual reporting and recordkeeping hour burden of 52,962 remains the same because there was no change in the number of respondents. There is an increase in annual cost due to inflation.

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

Petition for Exemption From the Federal Vehicle Theft Prevention Standard; Jaguar Land Rover North America LLC

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT). **ACTION:** Grant of petition for exemption.

SUMMARY: This document grants in full the Jaguar Land Rover North America LLC's, (Jaguar Land Rover) petition for an exemption of the Discovery Sport vehicle line in accordance with 49 CFR part 543, Exemption from Vehicle Theft *Prevention Standard*. This petition is granted because the agency has determined that the antitheft device to be placed on the line as standard equipment is likely to be as effective in reducing and deterring motor vehicle theft as compliance with the partsmarking requirements of 49 CFR part 541, Federal Motor Vehicle Theft Prevention Standard (Theft Prevention Standard). Jaguar Land Rover also requested confidential treatment of specific information in its petition. The agency will address Jaguar Land Rover's request for confidential treatment by separate letter.

DATES: The exemption granted by this notice is effective beginning with the 2015 model year (MY).

FOR FURTHER INFORMATION CONTACT: Ms. Deborah Mazyck, Office of International Policy, Fuel Economy and Consumer Programs, NHTSA, W43–443, 1200 New Jersey Avenue SE., Washington, DC 20590. Ms. Mazyck's phone number is (202) 366–4139. Her fax number is (202) 493–2990.

SUPPLEMENTARY INFORMATION: In a petition dated February 19, 2014, Jaguar Land Rover requested an exemption from the parts-marking requirements of the Theft Prevention Standard for the Jaguar Land Rover Discovery Sport vehicle line beginning with MY 2015. The petition requested an exemption from parts-marking pursuant to 49 CFR part 543, *Exemption from Vehicle Theft*

Prevention Standard, based on the installation of an antitheft device as standard equipment for the entire vehicle line.

Under 49 CFR 543.5(a), a manufacturer may petition NHTSA to grant an exemption for one vehicle line per model year. In its petition, Jaguar Land Rover provided a detailed description and diagram of the identity, design, and location of the components of the antitheft device for the Discovery Sport vehicle line. Jaguar Land Rover stated that the MY 2015 Discovery Sport vehicle line will be equipped with a passive, transponder based, electronic engine immobilizer antitheft device as standard equipment. Key components of its antitheft device will include a power train control module (PCM), instrument cluster, body control module (BCM), keyless vehicle module (KVM), remote frequency receiver (RFA), Immobilizer Antenna Unit, Smart Key and door control units. Jaguar Land Rover stated that its antitheft device will also be installed with an audible and visual perimeter alarm system as standard equipment. Jaguar Land Rover stated that the perimeter alarm system can be armed with the Smart Key or programmed to be passively armed. The alarm will sound and the vehicle's exterior lights will flash if unauthorized entry is attempted by opening the hood, doors or luggage compartment. Jaguar Land Rover's submission is considered a complete petition as required by 49 CFR 543.7, in that it meets the general requirements contained in §543.5 and the specific content requirements of § 543.6.

The immobilizer device is automatically armed when the Smart Key is removed from the vehicle. Jaguar Land Rover stated that the Smart key is programmed and synchronized to the vehicle through the means of a unique identification key code for each key and a randomly generated secret code that is unique to each vehicle.

Jaguar Land Rover stated that there will be three methods for unlocking the doors and starting the engine of the Discovery Sport vehicle line. The three methods of system operation will either be through the vehicle's automatic detection of the Smart Key, unlocking the vehicle with the Smart key unlock button or by using the emergency key blade. Jaguar Land Rover stated that automatic detection of the Smart key method occurs when authentication of the correct Smart Key via a low frequency to remote frequency challenge response sequence occurs. Specifically, when the driver approaches the vehicle and pulls the driver's door handle, the doors will unlock. When the driver

presses the ignition start button, a search begins to find and authenticate the Smart Key within the vehicle interior. If successful, this information is passed through a coded data transfer to the BCM via the RFA. Jaguar Land Rover stated that the BCM will then pass the valid key status to the instrument cluster, send the "key valid" message to the PCM, initiate a coded data transfer and authorize the engine to start. Method two of unlocking the vehicle with the Smart Key unlock button occurs when the driver approaches the vehicle, presses the Smart Key unlock button and unlocks the doors. Jaguar Land Rover stated that once the driver presses the ignition start button, the operation process is the same as method one. Method three involves using the emergency key blade. Jaguar Land Rover stated that if the Smart Key has a discharged or damaged battery, there is an emergency key blade that can be removed from the Smart Key and used to unlock the doors. Once the driver presses the ignition start button, a search begins to find and authenticate the Smart Key within the vehicle interior. If this is unsuccessful, the Smart Key needs to be docked in the lower steering column cowl. Once the Smart Key is placed in the correct position and the ignition start button is pressed again, the BCM and Smart key enter a coded data exchange via the immobilizer antenna unit. The BCM passes the valid key status to the instrument cluster, via the immobilizer antenna unit and then sends the "key valid" message to the PCM initiating a coded data transfer. If successful, the engine will start the vehicle.

In addressing the specific content requirements of § 543.6, Jaguar Land Rover provided information on the reliability and durability of its proposed device. To ensure reliability and durability of the device, Jaguar Land Rover conducted tests based on its own specified standards. Jaguar Land Rover provided a detailed list of the tests conducted (i.e., temperature and humidity cycling, high and low temperature cycling, mechanical shock, random vibration, thermal stress/shock tests, material resistance tests, dry heat, dust and fluid ingress tests). Jaguar Land Rover stated that it believes that its device is reliable and durable because it has complied with specified requirements for each test. Additionally, Jaguar Land Rover stated that the key recognition sequence includes in excess of a billion code combinations which include encrypted data that are secure against copying. Jaguar Land Rover also stated that the coded data transfer

between modules use a unique secure identifier, a random number and a secure public algorithm. Furthermore, Jaguar Land Rover stated that since the Discovery Sport vehicle line will utilize push button vehicle ignition, it does not have a conventional mechanical key barrel. Therefore, there will be no means of forcibly bypassing the key-locking system.

Jaguar Land Rover stated that the Discovery Sport is a new vehicle line and therefore no theft data is available. Jaguar Land Rover further stated that its immobilizer antitheft device is substantially similar to the antitheft device installed on the Jaguar F-Type, Jaguar XK, Jaguar XJ, Land Rover LR2 and Land Rover Range Rover Evoque vehicle lines and have all been granted parts-marking exemptions by the agency. Jaguar Land Rover stated that based on MY 2011 theft information published by NHTSA, the Jaguar Land Rover vehicles equipped with immobilizers had a combined theft rate of 0.79 per thousand vehicles, which is below NHTSA's overall theft rate of 0.99 thefts per thousand. The theft rates for the Jaguar XK, XJ and Land Rover LR2 are 0.8192, 1.4025 and 0.9001, respectively. Theft rate data is not available for the Jaguar F-Type and Land Rover Evoque. Jaguar Land Rover believes these low theft rates demonstrate the effectiveness of the immobilizer device. Additionally, Jaguar Land Rover notes a Highway Loss Data Institute news release (July 19, 2000) showing approximately a 50% reduction in theft for vehicles installed with an immobilizer device.

The agency agrees that the device is substantially similar to devices installed on other vehicle lines for which the agency has already granted exemptions

Based on the supporting evidence submitted by Jaguar Land Rover on its device, the agency believes that the antitheft device for the Discovery Sport vehicle line is likely to be as effective in reducing and deterring motor vehicle theft as compliance with the partsmarking requirements of the Theft Prevention Standard (49 CFR part 541). The agency concludes that the device will provide the five types of performance listed in § 543.6(a)(3): promoting activation; attract attention to the efforts of an unauthorized person to enter or move a vehicle by means other than a key; preventing defeat or circumvention of the device by unauthorized persons; preventing operation of the vehicle by unauthorized entrants; and ensuring the reliability and durability of the device.

Pursuant to 49 U.S.C. 33106 and 49 CFR 543.7 (b), the agency grants a

petition for exemption from the partsmarking requirements of Part 541 either in whole or in part, if it determines that, based upon substantial evidence, the standard equipment antitheft device is likely to be as effective in reducing and deterring motor vehicle theft as compliance with the parts-marking requirements of Part 541. The agency finds that Jaguar Land Rover has provided adequate reasons for its belief that the antitheft device for the Jaguar Land Rover Discovery Sport vehicle line is likely to be as effective in reducing and deterring motor vehicle theft as compliance with the parts-marking requirements of the Theft Prevention Standard (49 CFR Part 541). This conclusion is based on the information Jaguar Land Rover submitted on its device.

For the foregoing reasons, the agency hereby grants in full Jaguar Land Rover's petition for exemption for the Jaguar Land Rover Discovery Sport vehicle line from the parts-marking requirements of 49 CFR Part 541. The agency notes that 49 CFR Part 541, Appendix A-1, identifies those lines that are exempted from the Theft Prevention Standard for a given model year. 49 CFR Part 543.7(f) requires NHTSA to publish a notice of its decision to grant or deny an exemption petition in the Federal **Register**. Advanced listing, including the release of future product nameplates, the beginning model year for which the petition is granted and a general description of the antitheft device is necessary in order to notify law enforcement agencies of new vehicle lines exempted from the partsmarking requirements of the Theft Prevention Standard.

If Jaguar Land Rover decides not to use the exemption for this line, it must formally notify the agency. If such a decision is made, the line must be fully marked according to the requirements under 49 CFR Parts 541.5 and 541.6 (marking of major component parts and replacement parts).

NHTSA notes that if Jaguar Land Rover wishes in the future to modify the device on which this exemption is based, the company may have to submit a petition to modify the exemption. Part 543.7(d) states that a Part 543 exemption applies only to vehicles that belong to a line exempted under this part and equipped with the antitheft device on which the line's exemption is based. Further, Part 543.9(c)(2) provides for the submission of petitions "to modify an exemption to permit the use of an antitheft device similar to but differing from the one specified in that exemption."

The agency wishes to minimize the administrative burden that Part 543.9(c)(2) could place on exempted vehicle manufacturers and itself. The agency did not intend in drafting Part 543 to require the submission of a modification petition for every change to the components or design of an antitheft device. The significance of many such changes could be de minimis. Therefore, NHTSA suggests that if the manufacturer contemplates making any changes, the effects of which might be characterized as de *minimis,* it should consult the agency before preparing and submitting a petition to modify.

Authority: 49 U.S.C. 33106; delegation of authority at 49 CFR 1.50.

National Highway Traffic Safety Administration

[Docket No. NHTSA-2012-0068; Notice 5]

RIN 2127-AK72

Early Warning Reporting, Foreign Defect Reporting, and Motor Vehicle and Equipment Recall Reporting; Training Sessions

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT). **ACTION:** Meeting Notice—Training Sessions for Online Recalls Portal.

SUMMARY: NHTSA is requiring manufacturers to submit recall reports and associated documents online through a web-based, Internet portal beginning August 2014. Through this portal, manufacturers will not only file new reports, but will update and amend those reports, file quarterly reports on the progress of their recall campaigns, submit copies of representative communications they issue to owners and dealers, and conduct a host of other routine filings and communications with the agency attendant to a safety recall campaigns. NHTSA will offer twenty (20) online training sessions to instruct manufacturer staff and representatives on how to obtain accounts and use the new portal between July 28, 2014, and August 8, 2014

DATES: The training sessions will be offered between July 28, 2014, and August 8, 2014. Participants must register by July 25, 2014. Specific training dates and times can be found in the **SUPPLEMENTARY INFORMATION** section below.

ADDRESSES: All training sessions will be instructor-led and online. The web address and passcode will be provided to registered participants before their selected session. Attendees must register by close of business July 25, 2014. To register please send an email to *recalls.training@dot.gov* with the names of your participants, company name, company location, desired training date, and session choice.

FOR FURTHER INFORMATION CONTACT: Alex Ansley, Safety Recall Specialist, NHTSA, Phone: 202–493–0481, Email: *alexander.ansley@dot.gov.*

TRAINING SESSION DATES AND TIMES:

SUPPLEMENTARY INFORMATION: On August 20, 2013, NHTSA published a final rule requiring manufacturers to submit required recall information through a web-based, Internet portal accessed through our Web site www.safercar.gov. See 78 FR 51382, 51403. Through this portal, manufacturers will not only file new part 573 reports, but will update and amend those reports, file quarterly reports on the progress of their recall campaigns, submit copies of representative communications they issue to owners and dealers, and conduct a host of other routine filings and communications with the agency attendant to a safety recall campaigns. Safety recall document submissions will only be accepted through the new Recalls Portal beginning August 20, 2014. After this date, recall document submissions will not be accepted by U.S. Mail, email, or facsimile.

Online training sessions will be offered to any manufacturer personnel, representatives, and interested members of the public.¹ We recommend that manufacturer recall administrators and any persons that submit recall reports join a training session. We will offer two (2) types of training sessions: general sessions and specialty sessions. General sessions will be open to anyone and cover a broad range of scenarios and possible use-cases. Specialty sessions will also be open to anyone, but will be catered to certain types of manufacturers.

All training will be instructor-led WebEx sessions. Each training session will be limited to fifty (50) registered participants.

Training session date	Morning session (9:00 a.m11:30 a.m. Eastern)	Afternoon session (1:30 p.m.—4:00 p.m. Eastern)
Monday, July 28 Tuesday, July 29 Wednesday, July 30 Thursday, July 31 Friday, August 1 Monday, August 4 Tuesday, August 5 Wednesday, August 6 Thursday, August 7 Friday, August 8	General Session General Session General Session Specialty Session (Passenger Vehicle MFRs) Specialty Session (Heavy Duty Vehicle MFRs) Specialty Session (Tire MFRs) Specialty Session (Equipment MFRs) General Session	Specialty Session (Passenger Vehicle MFRs). Specialty Session (Child Restraint MFRs). Specialty Session (Equipment MFRs). Specialty Session (Passenger Vehicle MFRs). General Session. General Session. General Session. Specialty Session (Heavy Duty Vehicle MFRs). Specialty Session (Child Restraint MFRs).

How To Register

To register, please send an email to *recalls.training@dot.gov* and include the first and last name of the participant(s), company name, company location,

desired training date, and choose the morning or the afternoon session. Also, please include an alternative date/ session in the event your first choice is full. Registration emails must be

Headquarters in Washington, DC, to those who require it. Interested participants should indicate

received by July 25, 2014, in order to attend an online training session.

Training session access instructions will be sent to registered participants on or about July 25, 2014.

¹NHTSA can likely accommodate in-person training at the U.S. Department of Transportation

their need for in-person training when they reserve a training session.
