

by the same test participant during one or more drives. There is no limit to the number of *testable tasks* that may be evaluated by a test participant.

The revised text of Subsection VI.E.12 appends the following sentences to the above section:

However, it should be noted that including multiple tasks in a single session may lead to performance degradation due to test participant fatigue or confusion. Additionally, to ensure that the testing of each task reflects the demands of that task alone, all instructions, practice and testing for a single task should be completed before beginning a new task.

**3. Clarification of Maximum Allowable Number of Eye Glances Longer Than 2.0 Seconds**

Subsequent to publication of the Phase 1 NHTSA Driver Distraction

Guidelines, NHTSA became aware that the language used in Subsection VI.E.14.a, which describes the maximum number of eye glances longer than 2.0 seconds that may be observed for a conforming task during the driving simulator test procedure, was confusing to some readers. To improve the understandability of Subsection VI.E.14.a, that section has been revised as follows and an illustrative table has been added. Similar clarifying edits have also been made to Subsection VI.E.14.b, which describes the criteria for the mean duration of glances.

The original text of Subsection VI.E.14.a and b. read:

14. Acceptance Criteria. A *testable task* should be locked out from performance by drivers while driving unless the following three criteria are all met:

a. For at least 21 of the 24 test participants, no more than 15 percent (rounded up) of the total number of eye glances away from the forward road scene have durations of greater than 2.0 seconds while performing the testable task one time.

b. For at least 21 of the 24 test participants, the mean duration of all eye glances away from the forward road scene is less than or equal to 2.0 seconds while performing the testable task one time.

The text of Subsections VI.E.14.a and VI.E.14.b have been revised to read as follows:

a. For at least 21 of the 24 test participants, no more than 15 percent (rounded up to the next whole number) of each participant's total number of eye glances away from the forward road scene have durations of greater than 2.0 seconds while performing the testable task one time.

**TABLE 3—MAXIMUM ALLOWABLE NUMBER OF EYE GLANCES LONGER THAN 2.0 SECONDS**

Number of eye glances away from the forward road scene made by an individual test participant in performing a task	15% of the total number of eye glances away from the forward road scene	Maximum number of allowable off-road eye glances longer than 2.0 seconds
1	0.15	*0
2	0.30	1
3	0.45	1
4	0.60	1
5	0.75	1
6	0.90	1
7	1.05	2
8	1.20	2
9	1.35	2
10	1.50	2
11	1.65	2
12	1.80	2
13	1.95	2
14 through 20	>2.0	3

\* **Note:** See Section VI.E.14.b. If a testable task takes a test participant exactly one glance to perform, that glance must be no longer than 2.0 seconds in order to have a mean duration that does not exceed 2.0 seconds for all eye glances.

b. For at least 21 of the 24 test participants, the mean duration of each participant's eye glances away from the forward road scene is less than or equal to 2.0 seconds while performing the testable task one time.

**4. Typographical Error**

A typographical error was found in Section VI.G.4.b of the Phase 1 NHTSA Driver Distraction Guidelines. The phrase "How to drive the occlusion apparatus while not performing a testable task," should read "Become familiar with the occlusion apparatus operation while not performing a testable task." This change merely corrects the Guidelines language without substantively changing the content.

**5. Inadvertent Omission**

The agency inadvertently neglected to include a recommendation regarding multiple testable task testing in

Subsection VI.G., which relates to the occlusion test protocol. As discussed above, a recommendation regarding multiple task testing was included in the section related to driving simulator testing. In order to provide consistent recommendations for both test protocols, the agency has included a recommendation similar to the revised Subsection VI.E.12 in Subsection VI.G.18 that reads as follows:

18. Multiple *Testable Task* Testing. To improve testing efficiency, multiple (different) *testable tasks* may be performed by the same test participant during one or more sessions. There is no limit to the number of *testable tasks* that may be evaluated by a test participant. However, it should be noted that including multiple tasks in a single session may lead to performance degradation due to test participant fatigue or confusion. Additionally, to ensure that the testing of each task reflects the demands of that task alone, all instructions, practice and

testing for a single task should be completed before beginning a new task.
