Abstract: Gasoline combustion results in the formation of engine deposits that contribute to increased emissions. Detergent additives deter deposit formation. The Clean Air Act requires gasoline to contain a detergent additive. The regulations at 40 CFR part 80, subpart G specify certification requirements for manufacturers of detergent additives, recordkeeping and reporting requirements for blenders of detergents into gasoline or post-refinery component (any gasoline blending stock or any oxygenate which is blended with gasoline subsequent to the gasoline refining process), and recordkeeping and reporting requirements for manufacturers, transferors, or transferees of detergents, gasoline, or post-refinery component (PRC). These requirements ensure that (1) a detergent is effective before it is certified by EPA, (2) a certified detergent, at the minimum concentration necessary to be effective (known as the lowest additive concentration (LAC)), is blended into gasoline, and (3) only gasoline which contains a certified detergent at its LAC is delivered to the consumer. The EPA maintains a list of certified gasoline detergents, which is publicly available.

Form Numbers: None.

Respondents/affected entities: Manufacturers, transferors and transferees, and blenders into gasoline or post-refinery component of detergent additives; and detergent additive researchers.

Respondent's obligation to respond: Mandatory.

Estimated number of respondents: 1354 (total).

Frequency of response: Once, occasionally annually.

Total estimated burden: 220,181 hours (per year). Burden is defined at 5 CFR 1320.03(b).

Total estimated cost: \$18,854,168 including \$335,040 annualized capital or O&M costs.

Changes in the estimates: There is no change in the total estimated burden currently identified in the OMB Inventory of Approved ICR Burdens.

Acting Director, Collection Strategies Division.
