

whereas it minimizes the hazards to those employed in the initial or subsequent development of the blind drilled shaft.

The petitioner asserts that the proposed alternative method will at all times guarantee no less than the same measure of protection afforded the miners by the existing standard.

Docket Number: M-2014-030-C.

Petitioner: M-Class Mining, LLC, 11351 N. Thompsonville Road, Macedonia, Illinois 62860.

Mine: MC#1 Mine, MSHA I.D. No. 11-03189, located in Franklin County, Illinois.

Regulation Affected: 30 CFR 75.507-1(a) (Electric equipment other than power-connection points; outby the last open crosscut return air; permissibility requirements).

Modification Request: The petitioner requests a modification of the existing standard to permit the use of nonpermissible submersible deep well pumps in bleeder and return air courses. The petitioner proposes to install low-voltage alternating current submersible pumps in return and/or bleeder entries and sealed area of the MC#1 Mine. The petitioner states that:

(1) These low-voltage submersible pumps will provide a pumping option to the existing turbine pumps that are installed to maintain the bleeder and return entries from obstructions caused by water. Water accumulations in these airways can pose a safety hazard as they can affect the airflow in the active and inactive parts of the mine.

(2) The pumps may be installed between 600 and 1,200 feet below the surface.

(3) The three-phase low-voltage alternating current electric power circuits for the pumps will be designed and installed to:

(a) Contain either a direct or derived neutral wire, which must be grounded through a suitable resistor at the source transformer or power center and through a grounding circuit originating at the grounded side of the grounding resistor, which must extend along with the power conductors and serve as the grounding conductor for the frame of the pump and all associated electric equipment that may be supplied power from this circuit. The borehole casing will be bonded to the system grounded medium.

(b) Contain a grounding resistor that limits the ground-fault current to not more than 15 amperes. The grounding resistor will be rated for the maximum fault current available and will be insulated from ground for a voltage equal to the phase-to-phase voltage of the system.

(c) Provide protection by a suitable circuit breaker of adequate interrupting capacity with devices to protect against undervoltage, grounded phase, short-circuit, and overload.

(d) Contain a disconnecting device installed in conjunction with the circuit breaker to provide visual evidence that the power is disconnected.

(e) Include a fail-safe ground check circuit or other no less effective device approved by the Secretary as required by 30 CFR 75.902, that will cause the circuit breaker to open when either the ground or pilot wire is broken.

(4) The pump(s) electric control circuits will be designed and installed so that:

(a) The pump(s) cannot start and/or run in either the manual or the automatic mode if the water is below the low level indicator (probe or bubbler) level.

(b) The low level (probe or bubbler) water level probe will be located at least three feet above the pump inlet and motor and electrical connections of the pump(s).

(c) The high and low water probes must be suitable for submersible pump control application.

(d) All water level probe circuits will be protected with MSHA approved intrinsically safe barriers.

(e) A remote control and monitoring system may be used with the pump system for condition monitoring and for remote start-up and shutdown control of the pumps. The remote control and monitoring system will not allow remote reset of the pump power system when fault conditions (e.g., grounded phase, short circuit, or overload) exist on the system.

(5) The surface pump(s) control and power circuits will be examined, tested, and maintained as required by 30 CFR 77.502.

(6) Splices and connections made in submersible pump cable will be made in a workmanlike manner and will meet the requirements of 30 CFR 75.604. The pump installations will comply with all other applicable 30 CFR requirements.

(7) Within 60 days after the Proposed Decision and Order becomes final, the petitioner will submit proposed revisions for its approved part 48 training plan to the District Manager. The proposed revisions will specify task training for all qualified electricians who perform electric work and monthly electric examinations, testing and maintenance as required in 30 CFR 77.502, refresher training regarding the alternative method outlined in the petition, and the terms and conditions in the Proposed Decision and Order.

(8) The procedures of 30 CFR 48.3 for approval of proposed revisions to already approved training plans will apply.

The petitioner asserts that the proposed alternative method will at all times guarantee no less than the same measure of protection afforded the miners by the existing standard.

Dated: October 24, 2014.

Sheila McConnell,

Acting Director, Office of Standards, Regulations and Variances.

BILLING CODE 4510-43-P

OFFICE OF THE DIRECTOR OF NATIONAL INTELLIGENCE

Agency Information Collection Activities: Extension of Information Collection; Comment Request

AGENCY: Office of the Director of National Intelligence (ODNI).

ACTION: Notice.

SUMMARY: In December 2011, the ODNI accepted responsibility from the Information Security Oversight Office (ISOO) to manage the continuation in existence of Standard Form 714: Financial Disclosure Report, in accordance with the responsibilities assigned to the Director of National Intelligence (DNI) as Security Executive Agent. Standard Form 714 is used across the U.S. Government for assessing an individual's eligibility (or continued eligibility) for access to certain types of classified information. This standard form must be completed and submitted as a condition for access to designated classified information, along with a favorably adjudicated personnel security background investigation or reinvestigation. Accordingly, the ODNI is seeking to revive and maintain in effect for an additional three years the version of Standard Form 714 that expired on 6/30/12. The ODNI proposed no changes to the Standard Form 714 and its instructions at this time.

DATES: Written comments must be received on or before December 1, 2014 to be assured of consideration.

ADDRESSES: Comments should be sent to: dni-foia@dni.gov.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection and supporting statements should be directed to Ms. Jennifer L. Hudson, Director of the Information Management Division, Office of the Chief Information Officer, Office of the Director of

National Intelligence, Washington, DC 20511; 703-874-8085

SUPPLEMENTARY INFORMATION: Pursuant to the Paperwork Reduction Act of 1995 (Pub. L. 104-13), ODNI is requesting extension in effect of SF 714, proposing no changes to the Form and its instructions at this time. ODNI invites the general public and other Federal agencies to comment on Standard Form 714. The comments and suggestions should address one or more of the following points: (a) Whether the proposed information collection reflected in the Standard Form 714 meets the intent of section 1.3 (“Financial Disclosure”) of Executive Order 12968, as amended (“Access to Classified Information”); (b) the accuracy of the estimated burden of the proposed information collection for Standard Form 714; (c) ways to enhance the quality, utility, and clarity of the information to be collected in the Standard Form 714; (d) ways, including the use of information technology, to minimize the burden of the collection of information on all respondents to the Standard Form 714; and (e) whether small businesses are affected by this collection. The comments that are submitted will be summarized and included in the ODNI request for Office of Management and Budget (OMB) approval. All comments will become a matter of public record.

Abstract: The National Security Act of 1947, as amended; section 3001 of the Intelligence Reform and Terrorism Prevention Act of 2004; and Executive Order 13467, “Reforming Processes Related to Suitability for Government Employment, Fitness for Contractor Employees, and Eligibility for Access to Classified National Security Information,” authorize the DNI, as the Security Executive Agent, to develop standard forms, including a standard financial disclosure form, that promotes uniformity and consistency in the implementation of the Government’s security programs.

The Financial Disclosure Report contains information that is used to assist in making eligibility determinations for access to specifically designated classified information pursuant to Executive Order 12968, as amended, “Access to Classified Information.” The data may later be used as part of a review process to evaluate continued eligibility for access to such specifically designated classified information or as evidence in legal proceedings. In addition, law enforcement entities may use this data where pertinent to appropriate investigatory activity.

Respondent burden data follows below:

Title: Financial Disclosure Report.

OMB number: 3440-0001.

Agency form number: Standard Form 714.

Type of review: Regular.

Affected public: Business or other for-profit.

Estimated number of respondents: 86,000.

Estimated time per response: 2 hours.

Frequency of response: Annually.

Estimated total annual burden hours: 172,000 hours.

Dated: October 16, 2014.

Mark W. Ewing,

Chief Management Officer.

BILLING CODE 9500-01-P-P

NATIONAL SCIENCE FOUNDATION

Notice of Permit Applications Received Under the Antarctic Conservation Act of 1978

AGENCY: National Science Foundation.

ACTION: Notice of Permit Applications Received under the Antarctic Conservation Act of 1978, Public Law 95-541.

SUMMARY: The National Science Foundation (NSF) is required to publish a notice of permit applications received to conduct activities regulated under the Antarctic Conservation Act of 1978. NSF has published regulations under the Antarctic Conservation Act at Title 45 part 670 of the Code of Federal Regulations. This is the required notice of permit applications received.

DATES: Interested parties are invited to submit written data, comments, or views with respect to this permit application by December 1, 2014. This application may be inspected by interested parties at the Permit Office, address below.

ADDRESSES: Comments should be addressed to Permit Office, Room 755, Division of Polar Programs, National Science Foundation, 4201 Wilson Boulevard, Arlington, Virginia 22230.

FOR FURTHER INFORMATION CONTACT: Li Ling Hamady, ACA Permit Officer, at the above address or ACApermits@nsf.gov or (703) 292-7149.

SUPPLEMENTARY INFORMATION: The National Science Foundation, as directed by the Antarctic Conservation Act of 1978 (Pub. L. 95-541), as amended by the Antarctic Science, Tourism and Conservation Act of 1996, has developed regulations for the establishment of a permit system for

various activities in Antarctica and designation of certain animals and certain geographic areas requiring special protection. The regulations establish such a permit system to designate Antarctic Specially Protected Areas.

Application Details

1. *Applicant, Permit Application: 2015-012*

Dr. Diana H. Wall, Natural Resource Ecology Lab, Dept. 1499, Colorado State University, Fort Collins, CO 80526-1499

Activity for Which Permit Is

Requested: ASPA entry, Import.

Applicant wishes to enter Cape Royds ASPA 121 to collect soil samples and associated invertebrates as well as benthic algal mats and underlying soil. This project follows up on several past surveys of orthinogenic soils conducted in this ASPA which examined invertebrate genetic distribution, and also explores the influence of climate change on soil invertebrate populations. The algae sampling is to also follow up on previous surveys, to examine the temporal stability of lake algal communities in the region. Soil samples of approximately 600 grams each would be collected at up to 30 sites within the ASPA using sterile collecting techniques. For benthic algae, at 6 sites along the shore of Poly Lake, the applicant and team would use a sanitized 2cm copper coring apparatus to collect, by hand, 4 replicates of surface algal mats and 1-2 cm of underlying sediment. Samples would be transported back to the US for further study.

Location: ASPA 121 Cape Royds.

Dates: January 1, 2015-February 15, 2015.

Nadene G. Kennedy,

Polar Coordination Specialist, Division of Polar Programs.
