

contractual relationship with that PSAP, statewide default answering point, or appropriate local emergency authority, shall be the 911 NOC Provider in that jurisdiction.

(b) *Responsibilities of 911 NOC Provider.* The 911 NOC Provider in each jurisdiction shall monitor the availability of 911 services and coordinate situational awareness and information sharing during disruptions in 911 service. For purposes of this section, disruptions in 911 service include events resulting in a complete loss of 911 service, as well as events that substantially impair service quality or public access to 911 without a complete loss of service, including disruption of automatic location information (ALI), automatic number identification (ANI), location information services (LIS), or any other services that locate callers geographically.

(1) In the event of such a disruption in 911 service, the 911 NOC Provider shall request information from any other affected covered 911 service provider(s) regarding their situational awareness of the cause and scope of the outage from the origination to the completion of 911 communications, including voice calls, ALI, ANI, LIS, and text-to-911. The 911 NOC Provider shall then communicate to any other affected covered 911 service providers, PSAPs, state emergency management offices, and to the Commission's Operations Center, all information reasonably available to mitigate the effects of the disruption and to restore service.

(2) All other covered 911 service providers shall communicate to the 911 NOC Provider all reasonably available information regarding the cause and scope of a disruption in 911 service that occurs on or affects portions of the 911 network that they own, lease, or otherwise operate or control and shall respond promptly to any request for such information by the 911 NOC Provider.

BILLING CODE 6712-01-P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 73

[MB Docket No. 14-236; RM-11739; DA 15-10]

Radio Broadcasting Services; Bogata, Texas

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: This document requests comments on a Petition for Rule Making filed by Charles Crawford, proposing to amend the FM Table of Allotments, of the Commission's rules, by allotting Channel 247A at Bogata, Texas, as a first local service. A staff engineering analysis indicates that Channel 247A can be allotted to Bogata, Texas consistent with the minimum distance separation requirements of the Commission's rules with a site restriction located 12.9 kilometers (8 miles) northwest of Bogata. The reference coordinates are 33-33-21 NL and 95-18-28 WL.

DATES: Comments must be filed on or before March 2, 2015, and reply comments on or before March 17, 2015.

ADDRESSES: Secretary, Federal Communications Commission, 445 12th Street SW., Washington, DC 20554. In addition to filing comments with the FCC, interested parties should serve the petitioner as follows: Charles Crawford, 2215 Cedar Springs Rd., #1605, Dallas, Texas 75201.

FOR FURTHER INFORMATION CONTACT: Rolanda F. Smith, Media Bureau, (202) 418-2700.

SUPPLEMENTARY INFORMATION: This is a synopsis of the Commission's *Notice of Proposed Rule Making*, MB Docket No. 14-236, adopted January 8, 2015, and released January 9, 2015. The full text of this Commission decision is available for inspection and copying during normal business hours in the FCC's Reference Information Center at Portals II, CY-A257, 445 12th Street SW., Washington, DC 20554. This document may also be purchased from the Commission's duplicating contractors, Best Copy and Printing, Inc., 445 12th Street SW., Room CY-B402, Washington, DC 20554, telephone 1-800-378-3160 or via email www.BCPIWEB.com. This document does not contain proposed information collection requirements subject to the Paperwork Reduction Act of 1995, Public Law 104-13. In addition, therefore, it does not contain any proposed information collection burden "for small business concerns with fewer than 25 employees," pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107-198, *see* 44 U.S.C. 3506(c)(4).

Provisions of the Regulatory Flexibility Act of 1980 do not apply to this proceeding.

Members of the public should note that from the time a Notice of Proposed Rule Making is issued until the matter is no longer subject to Commission consideration or court review, all *ex parte* contacts are prohibited in

Commission proceedings, such as this one, which involve channel allotments. See 47 CFR 1.1204(b) for rules governing permissible *ex parte* contacts.

For information regarding proper filing procedures for comments, see 47 CFR 1.415 and 1.420.

List of Subjects in 47 CFR Part 73

Radio, Radio broadcasting.
Federal Communications Commission.
Nazifa Sawez,
Assistant Chief, Audio Division, Media Bureau.

Proposed Rule

For the reasons discussed in the preamble, the Federal Communications Commission proposes to amend 47 CFR part 73 as follows:

PART 73—RADIO BROADCAST SERVICES

■ 1. The authority citation for part 73 continues to read as follows:

Authority: 47 U.S.C. 154, 303, 334, 336 and 339.

§ 73.202 [Amended]

■ 2. Section 73.202(b), the Table of FM Allotments under Texas, is amended by adding Bogata, Channel 247A.

[FR Doc. 2015-01021 Filed 1-21-15; 8:45 am]

BILLING CODE 6712-01-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 622

[Docket No. 140501394-5011-01]

RIN 0648-BE20

Fisheries of the Caribbean, Gulf of Mexico, and South Atlantic; Snapper-Grouper Fishery Off the Southern Atlantic States; Amendment 32

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Proposed rule; request for comments.

SUMMARY: NMFS proposes regulations to implement Amendment 32 to the Fishery Management Plan for the Snapper-Grouper Fishery of the South Atlantic Region (FMP), as prepared by the South Atlantic Fishery Management Council (Council). If implemented, this rule would remove blueline tilefish from the deep-water complex; establish blueline tilefish commercial and

recreational sector annual catch limits (ACLs) and accountability measures (AMs); revise the deep-water complex ACLs and AMs; establish a blue-line tilefish commercial trip limit; and revise the blue-line tilefish recreational bag limit. The purpose of this rule is to specify ACLs and AMs for blue-line tilefish to end overfishing of the stock and maintain catch levels consistent with achieving optimum yield (OY) for the blue-line tilefish resource.

DATES: Written comments must be received on or before February 23, 2015.

ADDRESSES: You may submit comments on the proposed rule identified by "NOAA-NMFS-2014-0145" by any of the following methods:

- *Electronic Submission:* Submit all electronic public comments via the Federal e-Rulemaking Portal. Go to www.regulations.gov/#!docketDetail;D=NOAA-NMFS-2014-0145, click the "Comment Now!" icon, complete the required fields, and enter or attach your comments.

- *Mail:* Submit written comments to Rick DeVictor, Southeast Regional Office, NMFS, 263 13th Avenue South, St. Petersburg, FL 33701.

Instructions: Comments sent by any other method, to any other address or individual, or received after the end of the comment period, may not be considered by NMFS. All comments received are a part of the public record and will generally be posted for public viewing on www.regulations.gov without change. All personal identifying information (e.g., name, address, etc.), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NMFS will accept anonymous comments (enter "N/A" in the required fields if you wish to remain anonymous). Attachments to electronic comments will be accepted in Microsoft Word, Excel, or Adobe PDF file formats only.

Electronic copies of Amendment 32, which includes an environmental assessment, an initial regulatory flexibility analysis (IRFA), and a regulatory impact review, may be obtained from the Southeast Regional Office Web site at http://sero.nmfs.noaa.gov/sustainable_fisheries/atl/sg/2014/am32/index.html.

FOR FURTHER INFORMATION CONTACT: Rick DeVictor, telephone: 727-824-5305, or email: rick.devictor@noaa.gov.

SUPPLEMENTARY INFORMATION: The blue-line tilefish is in the snapper-grouper fishery of the South Atlantic, and the fishery is managed under the FMP. The FMP was prepared by the

Council and is implemented through regulations at 50 CFR part 622 under the authority of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act).

Background

A benchmark assessment for the blue-line tilefish stock in the South Atlantic was conducted through the Southeast, Data, Assessment, and Review (SEDAR) process in 2013 (SEDAR 32). At its October 2013 meeting, the Council's Scientific and Statistical Committee (SSC) determined the 2013 stock assessment was based on the best scientific information available and considered the assessment to be appropriate for management decisions. The assessment determined that the blue-line tilefish stock is undergoing overfishing in the South Atlantic. As required by the Magnuson-Stevens Act, the Council must therefore implement measures to end overfishing within 2 years of notification of an overfishing status. NMFS notified the Council of the blue-line tilefish stock status on December 6, 2013.

The Magnuson-Stevens Act requires that ACLs and AMs be implemented to prevent overfishing and achieve the OY from a fishery. An ACL is the level of annual catch of a stock that, if exceeded, triggers AMs. AMs are management controls to prevent ACLs from being exceeded and to correct any overages of ACLs if they occur. Two examples of AMs include an in-season closure if landings reach or are projected to reach the ACL, and a post-season overage adjustment which would reduce the ACL if an overage occurred during the previous fishing year.

NMFS published an emergency rule on April 17, 2014 (79 FR 21636), that implemented temporary measures to reduce overfishing of blue-line tilefish while Amendment 32 was being developed. Those measures were extended through a temporary rule on October 14, 2014 (79 FR 61262, October 10, 2014), and are effective through April 18, 2015, while Amendment 32 and the associated rulemaking are under review. The temporary measures of the emergency action include the following: Removal of blue-line tilefish from the deep-water complex, specification of sector ACLs and AMs for blue-line tilefish, and revision to the deep-water complex ACL to reflect the removal of blue-line tilefish from the complex.

Management Measures Contained in This Proposed Rule

Removal of Blue-line Tilefish From the Deep-Water Complex

This proposed rule would remove blue-line tilefish from the deep-water complex. In 2012, the Comprehensive ACL Amendment established a deep-water complex that contained the following eight species: blue-line tilefish, yellowedge grouper, silk snapper, misty grouper, queen snapper, sand tilefish, black snapper, and blackfin snapper (77 FR 15916, March 16, 2012). The Comprehensive ACL Amendment also specified ACLs and AMs for the complex where the complex's ACLs were based upon an acceptable biological catch (ABC) recommendation provided by the Council's SSC. In the absence of stock assessments, the ABCs for these and other unassessed species in the Comprehensive ACL Amendment were based on median or average catch. The Council placed most unassessed snapper-grouper species into complexes because many unassessed snapper-grouper species are data-limited stocks that are known to have issues with species identification and/or extreme fluctuations in relative landings through time due to rarity, or lack of targeted fishing effort.

As a result of blue-line tilefish being assessed through SEDAR 32 and the Council's SSC providing an assessment-based ABC recommendation for blue-line tilefish, the Council decided to remove blue-line tilefish from the deep-water complex and establish individual ACLs and AMs for the blue-line tilefish stock. The Council has determined that sufficient information is now available for blue-line tilefish and the rationale for grouping the species with other data-limited species in the deep-water complex no longer applies.

Blue-line Tilefish Commercial and Recreational ACLs and AMs

This proposed rule would implement individual blue-line tilefish commercial and recreational sector ACLs (based on the revised ABC for blue-line tilefish specified in Amendment 32) to end overfishing of the stock. In Amendment 32, the Council defines the blue-line tilefish stock ACL equal to 98 percent of the ABC. Due to improved data reporting, the Council has consistently chosen to set ACL equal to ABC for snapper-grouper species. However, for blue-line tilefish in Amendment 32, the Council decided to set the stock ACL at 98 percent of the proposed ABC to account for landings that occur north of the Council's area of jurisdiction. Approximately 2 percent of the total

bluefin tilefish harvested were landed north of the North Carolina/Virginia border. Therefore, this rule would establish bluefin tilefish stock ACLs (combined commercial and recreational ACLs, equivalent to a total ACL), of 35,632 lb (16,162 kg) for 2015, 53,457 lb (24,248 kg) for 2016, 71,469 lb (32,418 kg) for 2017, and 87,974 lb (39,904 kg) for 2018, and subsequent fishing years. All ACL weights are expressed in round weight. Additionally, this rule would establish sector-specific ACLs for the bluefin tilefish commercial and recreational sectors based upon the Council's previously established bluefin tilefish allocations of 50.07 percent and 49.93 percent for the commercial and recreational sectors, respectively. The commercial ACLs would be 17,841 lb (8,093 kg) for 2015, 26,766 lb (12,141 kg) for 2016, 35,785 lb (16,232 kg) for 2017, and 44,048 lb (19,980 kg) for 2018, and subsequent fishing years. The recreational ACLs would be 17,791 lb (8,070 kg) for 2015, 26,691 lb (12,107 kg) for 2016, 35,685 lb (16,186 kg) for 2017, and 43,925 lb (19,924 kg) for 2018, and subsequent fishing years.

This rule would implement commercial and recreational in-season AMs for bluefin tilefish. If commercial or recreational landings for bluefin tilefish reach or are projected to reach the applicable ACL, then the commercial or recreational sector, as applicable, would be closed for the remainder of the fishing year. The recreational sector would not have an in-season closure if the Regional Administrator (RA) determines, using the best scientific information available, that a closure would be unnecessary.

Additionally, if the total ACLs are exceeded in a fishing year, then during the following fishing year the commercial and recreational sectors will not have an increase in their respective sector ACLs.

This rule would also implement post-season ACL overage adjustments (paybacks) for bluefin tilefish. For the commercial sector, if commercial landings exceed the commercial ACL, and the combined commercial and recreational ACL (stock ACL) is exceeded, and bluefin tilefish are overfished, then during the following fishing year the commercial ACL would be reduced for that following year by the amount of the commercial ACL overage in the prior fishing year. For the recreational sector, if recreational landings for bluefin tilefish exceed the applicable recreational ACL, and the combined commercial and recreational ACL (stock ACL) is exceeded, and bluefin tilefish are overfished, then the

recreational fishing season in the following fishing year would be reduced to ensure recreational landings do not exceed the recreational ACL the following fishing year. Additionally, the recreational ACL would be reduced by the amount of the recreational ACL overage from the prior fishing year. However, the recreational fishing season and recreational ACL would not be reduced if the RA determines, using the best scientific information available that no reduction is necessary.

Additional Bluefin Tilefish Management Measures

This rule would implement a commercial trip limit and revise the recreational bag limit for bluefin tilefish. This rule would establish a commercial trip limit of 100 lb (45 kg), gutted weight; 112 lb (51 kg), round weight. The trip limit is expected to slow the rate of harvest, potentially lengthening the commercial season during a fishing year, and reduce the risk of the commercial ACL from being exceeded.

For the recreational bag limit, bluefin tilefish are currently part of the aggregate grouper and tilefish bag limit of 3 fish per person per day. This proposed rule would revise the bluefin tilefish bag limit within the aggregate to set a specific bluefin tilefish bag limit of one per vessel per day for the months of May through August. There would be no retention of bluefin tilefish by the recreational sector from January through April and from September through December each year. A bag limit of one bluefin tilefish per vessel per day and an 8-month annual closure was determined to best meet address ending overfishing, reducing recreational harvest, and potentially reducing bluefin tilefish discards if bluefin tilefish are targeted less during the open season because of the lower bag limit. The Council determined that the shortened summer seasonal opening could provide increased stability for planning purposes to recreational fishermen as it could minimize the risk of an in-season closure and the recreational ACL being exceeded, which may require post-season AMs in the following fishing year. In addition, the Council determined that an opening during the summer months could increase safety at sea by allowing fishing to occur in the generally calmer summer weather compared to a January 1 season opening during the winter. The vessel limit and fishing season dates for the bluefin tilefish recreational sector would match what is being proposed by the Council for snowy grouper through Regulatory Amendment 20 to the FMP.

The Council determined that similar recreational management measures and fishing seasons would be beneficial to the fish stocks as both species are caught at the same depths and have similar high release mortality rates.

Deep-Water Complex Commercial and Recreational ACLs and AMs

This proposed rule would revise the ACLs and AMs for the deep-water complex (composed of yellowedge grouper, silk snapper, misty grouper, queen snapper, sand tilefish, black snapper, and blackfin snapper). The ACLs are being revised for two reasons. First, as Amendment 32 proposes to remove bluefin tilefish from the deep-water complex, this proposed rule would remove the current bluefin tilefish portion from the complex total ACL. The permanent bluefin tilefish portion of the complex ACL is 631,341 lb (286,371 kg), round weight, and the total deep-water complex ACL is 711,025 lb (322,516 kg), round weight. The emergency rule set both a new, separate bluefin tilefish ACL of 224,100 lb (101,650 kg), round weight and a revised deep-water complex ACL without bluefin tilefish of 79,684 lb (36,144 kg), round weight. Second, through Amendment 29 to the FMP, which is currently in rulemaking, the Council is proposing a revision to the ABC control rule for data-poor species based on recommendations from the SSC. If Amendment 29 is approved and implemented, the portion of the deep-water complex ABC for silk snapper and yellowedge grouper would change. The Council submitted Amendment 29 to the Secretary of Commerce on October 14, 2014, the notice of availability for the amendment was published in the **Federal Register** on November 24, 2014 (79 FR 69819), and the proposed rule published in the **Federal Register** on December 8, 2014 (79 FR 72567).

Therefore, this proposed rule would change the deep-water complex total ACL (both sectors without bluefin tilefish but with the increased catch levels for silk snapper and yellowedge grouper resulting from Amendment 29), to 170,278 lb (77,237 kg), round weight. Additionally, this proposed rule would establish sector specific ACLs for the deep-water complex based on the allocations for species in the deep-water complex that were established in the Comprehensive ACL Amendment (77 FR 15916, March 16, 2012). The commercial ACL for the complex would be 131,634 lb (59,708 kg), round weight and the recreational ACL for the complex would be 38,644 lb (17,529 kg), round weight.

This proposed rule would revise the AMs for the deep-water complex. This proposed rule would retain the current commercial in-season AM, revise the commercial post-season AM, and implement revised recreational AMs for the deep-water complex. If commercial or recreational landings for the deep-water complex reach or are projected to reach their applicable ACL, then the commercial or recreational sector, as applicable, would be closed for the remainder of the fishing year. The recreational sector would not have an in-season closure if the RA determined, using the best scientific information available, that a closure was unnecessary. The Council decided that the in-season AM for both sectors is necessary to reduce the risk that landings exceed the ACL.

This proposed rule would also modify the post-season ACL overage adjustments for the deep-water complex. Currently, if deep-water complex commercial landings exceed the ACL and at least one species in the complex is overfished, the commercial ACL is reduced in the following year by the overage amount. This proposed rule would modify the commercial post-season AMs as follows: If commercial landings exceed the commercial ACL, and the combined commercial and recreational ACL (total ACL) is exceeded, and at least one species in the deep-water complex is overfished, then during the following fishing year the complex commercial ACL would be reduced for that following year by the amount of the complex's commercial ACL overage in the prior fishing year.

Currently, if recreational landings for the deep-water complex exceed the recreational ACL, then during the following fishing year, recreational landings will be monitored for a persistence in increased landings and, if necessary, the length of the following recreational fishing season will be reduced by the amount necessary to ensure recreational landings do not exceed the recreational ACL in the following fishing year. This proposed rule would modify the recreational post-season AMs as follows: For the recreational sector, if recreational landings for the deep-water complex exceed the applicable recreational ACL, and the combined commercial and recreational ACL is exceeded, and at least one species in the complex is overfished, then length of the recreational fishing season in the following fishing year would be reduced to ensure recreational landings do not exceed the recreational ACL the following fishing year. Additionally, the recreational ACL would be reduced by

the amount of the recreational ACL overage from the prior fishing year. However, the recreational fishing season and recreational ACL would not be reduced if the RA determined, using the best scientific information available, that no reduction is necessary.

Additional Measures Contained in Amendment 32

Amendment 32 also contains actions that would not be specified in the regulations. Amendment 32 revises the definitions of management thresholds for South Atlantic bluefin tilefish, including maximum sustainable yield (MSY), OY, and ABC, and establishes recreational annual catch targets (ACTs) for bluefin tilefish and revises the ACTs for the deep-water complex.

Definitions of MSY and OY were established for bluefin tilefish in Amendment 11 to the FMP (64 FR 59126, November 2, 1999). Amendment 32 would revise these definitions based upon the most recent scientific information contained in SEDAR 32. Amendment 32 would specify the MSY value for bluefin tilefish and set the OY equal to the ACL. Amendment 32 would also establish recreational ACTs for bluefin tilefish and revise the ACTs for the deep-water complex. The deep-water complex ACTs are being revised to reflect the removal of bluefin tilefish from the complex and the change in the deep-water complex ABC as described above. These ACTs are management reference points to track performance of the management measures but do not trigger AMs.

Classification

Pursuant to section 304(b)(1)(A) of the Magnuson-Stevens Act, the NMFS Assistant Administrator has determined that this proposed rule is consistent with Amendment 32, the FMP, the Magnuson-Stevens Act and other applicable law, subject to further consideration after public comment.

This proposed rule has been determined to be not significant for purposes of Executive Order 12866.

NMFS prepared a supplemental IRFA for this rule, as required by section 603 of the Regulatory Flexibility Act, 5 U.S.C. 603. The IRFA describes the economic impact that this proposed rule, if implemented, would have on small entities. A description of the action, why it is being considered, and the objectives of and legal basis for this action are contained in the preamble. A copy of the full analysis is available from the NMFS (see **ADDRESSES**). A summary of the supplemental IRFA follows.

Every commercial fishing vessel in the South Atlantic snapper-grouper fishery must have either a valid Federal South Atlantic unlimited snapper-grouper permit or a trip-limited permit. Both permits are limited access permits, and a vessel with a trip-limited permit is limited to no more than 225 lb (102.1 kg) round weight (whole weight), per trip. As of November 5, 2014, there were 539 vessels with a valid unlimited permit and 111 vessels with a valid trip-limited permit. An estimated annual average of 277 vessels landed deep-water complex species from 2008 through 2012. From that, it is estimated that up to 277 commercial fishing vessels and up to 277 commercial fishing businesses would be directly affected by the proposed rule.

According to Small Business Act Size Standards, a business in the finfish fishing industry is small if its annual receipts are less than \$20.5 million. Based on estimates of average annual dockside revenue per vessel, it is concluded that a substantial number of the directly affected commercial fishing businesses are small businesses.

The proposed changes to management measures would directly apply to businesses in the finfish fishing industry (NAICS 114111) that harvest bluefin tilefish and other species of the deep-water complex of the South Atlantic snapper-grouper fishery. Proposed changes in this rule would also directly apply to anglers; however, anglers, whether aboard for-hire fishing or private and leased vessels, are not considered small entities as that term is defined in 5 U.S.C. 601(6) and so therefore are not further discussed in this summary.

The proposed increase of the commercial ACL for the deep-water complex beyond its temporary value could have a beneficial economic impact by as much as an additional \$244,116 to \$338,690 (2012 dollars) annually in dockside revenue. The average annual economic benefit per vessel is estimated to be from \$1,596 to \$2,214 (2012 dollars).

The proposed commercial ACL and AMs for bluefin tilefish are expected to reduce average annual commercial landings of bluefin tilefish from 2015 through 2019 by as much as 142,300 to 323,426 lb (64,546 to 146,704 kg) round weight, and dockside revenue by as much as \$576,330 to \$679,195 (2012 dollars). That change represents an approximate 89 percent to 91 percent reduction of average annual dockside revenue from bluefin tilefish landings over that time. The average annual loss per vessel is estimated to range from \$4,648 to \$5,477 (2012 dollars), which

represents approximately 6 percent to 7 percent of average annual receipts of these vessels.

From 2008 through 2012, the average trip landed 525 lb (238.1 kg) gutted weight, of blueline tilefish, and an annual average of 124 commercial vessels had blueline tilefish landings. Without the proposed trip limit, the current average landings of 525 lb (238.1 kg), gutted weight, per trip would reach the proposed commercial ACL of 17,841 lb (8,092.5 kg) round weight, or 15,929 lb (7,225.3 kg), gutted weight, in 2015, by 30 trips and an estimated 94 vessels and up to 94 small businesses would have no blueline tilefish landings in 2015, as a result of AMs being triggered and the commercial season being closed. The proposed 100-lb (45.4-kg), gutted weight, trip limit would increase the number of trips necessary to reach the commercial ACL to 1,593, which would improve the likelihood that all of the estimated 124 vessels and small businesses, especially the smallest of those businesses, would have some blueline tilefish commercial landings during the year.

The 100-lb (45.4-kg) trip limit would reduce average blueline tilefish landings per trip by 425 lb (192.8 kg) gutted weight, and \$897 (2012 dollars), which is an 81 percent reduction in landings (by weight and value) per trip with blueline tilefish landings. That reduction of average blueline tilefish landings per trip represents a loss of approximately 28 percent of average dockside revenue per trip.

The average of 525 lb (238.1 kg), gutted weight, per trip is not representative of all vessels in the snapper-grouper fishery. Vessels with a trip-limited permit cannot presently land more than 201 lb (91.2 kg), gutted weight, of blueline tilefish per trip. The small businesses with trip-limited permits would lose no more than \$222 (2012 dollars) in dockside revenue per trip. Hence, the 100 lb (45.4-kg), gutted weight, trip limit would represent at most a 51 percent reduction in landings (by weight and value) per trip for those vessels with a trip-limited permit.

The proposed 100 lb (45.4 kg), gutted weight, trip limit would increase trip-related costs. Specifically, it would prevent larger vessels from experiencing traditional economies of scale. Consequently, it is expected that small businesses with vessels that have unlimited poundage permits would incur larger increases in average unit costs per pound of blueline tilefish landed than those with vessels that have 225 lb (102.1 kg), round weight, trip limit permits.

Commercial ACLs for the deep-water complex less than the proposed 131,634 lb (59,708 kg), round weight, were considered but not adopted by the Council. A lesser commercial ACL would result in either a smaller beneficial economic impact than the preferred alternative or an adverse economic impact.

A lesser commercial ACL for blueline tilefish was considered but not adopted and it, when combined with the in-season AM, would generate larger adverse economic impacts on small businesses. Other considered but not adopted alternatives would establish a higher commercial ACL than the preferred alternative for blueline tilefish, which would have smaller adverse economic impacts in the short run, but potentially larger adverse economic impacts in the long run.

Among the considered but not adopted alternatives were higher commercial trip limits, which would have smaller adverse economic impacts on small businesses per trip. However, the higher trip limits would shorten the length of the open commercial season, reduce the number of small businesses that have landings of blueline tilefish during the year, and increase the likelihood that the smallest of the small businesses would have zero blueline tilefish landings during the year.

List of Subjects in 50 CFR Part 622

Blueline tilefish, deep-water complex, Fisheries, Fishing, South Atlantic, Snapper-Grouper.

Dated: January 14, 2015.

Samuel D. Rauch III,
Deputy Assistant Administrator for
Regulatory Programs, National Marine
Fisheries Service.

For the reasons set out in the preamble, 50 CFR part 622 is proposed to be amended as follows:

PART 622—FISHERIES OF THE CARIBBEAN, GULF OF MEXICO, AND SOUTH ATLANTIC

■ 1. The authority citation for part 622 continues to read as follows:

Authority: 16 U.S.C. 1801 *et seq.*

■ 2. In § 622.183, paragraph (b)(7) is added to read as follows:

§ 622.183 Area and seasonal closures.

* * * * *

(b) * * *

(7) *Blueline tilefish recreational sector closure.* The recreational sector for blueline tilefish in or from the South Atlantic EEZ is closed from January 1 through April 30, and September 1 through December 31, each year. During

a closure, the bag and possession limit for blueline tilefish in or from the South Atlantic EEZ is zero.

■ 3. In § 622.187, paragraphs (b)(2)(iii) and (iv) are revised and paragraph (v) is added to read as follows:

§ 622.187 Bag and possession limits.

* * * * *

(b) * * *

(2) * * *

(iii) No more than one fish may be a golden tilefish;

(iv) No more than one fish per vessel may be a blueline tilefish; and

(v) No goliath grouper or Nassau grouper may be retained.

* * * * *

■ 4. In § 622.191, paragraph (a)(10) is added to read as follows:

§ 622.191 Commercial trip limits.

* * * * *

(a) * * *

(10) *Blueline tilefish.* Until the applicable ACL specified in § 622.193(z)(1)(iii) is reached or projected to be reached, 100 lb (45 kg), gutted weight; 112 lb (51 kg), round weight. See § 622.193(z)(1)(i) for the limitations regarding blueline tilefish after the commercial ACL is reached.

* * * * *

■ 5. In § 622.193, the suspension on paragraph (h) is lifted and paragraph (h) is revised, and paragraph (z) is added to read as follows:

§ 622.193 Annual catch limits (ACLs), annual catch targets (ACTs), and accountability measures (AMs).

* * * * *

(h) *Deep-water complex (including yellowedge grouper, silk snapper, misty grouper, queen snapper, sand tilefish, black snapper, and blackfin snapper)—*

(1) *Commercial sector—*(i) If commercial landings for the deep-water complex, as estimated by the SRD, reach or are projected to reach the commercial ACL of 131,634 lb (59,708 kg), round weight, the AA will file a notification with the Office of the Federal Register to close the commercial sector for the remainder of the fishing year. On and after the effective date of such a notification, all sale or purchase of deep-water complex species is prohibited and harvest or possession of these species in or from the South Atlantic EEZ is limited to the bag and possession limit. This bag and possession limit applies in the South Atlantic on board a vessel for which a valid Federal commercial or charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, without regard to where such species were harvested, *i.e.*, in state or Federal waters.

(ii) If commercial landings exceed the ACL, and the combined commercial and recreational ACL (total ACL) specified in paragraph (h)(3) of this section, is exceeded, and at least one of the species in the deep-water complex is overfished, based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year to reduce the commercial ACL for that following year by the amount of the commercial ACL overage in the prior fishing year.

(2) *Recreational sector.* (i) If recreational landings for the deep-water complex, as estimated by the SRD, are projected to reach the recreational ACL of 38,644 lb (17,529 kg), round weight, the AA will file a notification with the Office of the Federal Register to close the recreational sector for the remainder of the fishing year, unless the RA determines that no closure is necessary based on the best scientific information available. On and after the effective date of such a notification, the bag and possession limit is zero.

(ii) If recreational landings for the deep-water complex, exceed the applicable recreational ACL, and the combined commercial and recreational ACL (total ACL) specified in paragraph (h)(3) of this section is exceeded, and at least one of the species in the deep-water complex is overfished, based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register, to reduce the length of the recreational fishing season in the following fishing year to ensure recreational landings do not exceed the recreational ACL the following fishing year. When NMFS reduces the length of the following recreational fishing season and closes the recreational sector, the following closure provisions apply: The bag and possession limits for the deep-water complex in or from the South Atlantic EEZ is zero. Additionally, the recreational ACL will be reduced by the amount of the recreational ACL overage in the prior fishing year. The fishing season and recreational ACL will not be reduced if the RA determines, using the best scientific information available that no reduction is necessary.

(3) The combined commercial and recreational sector ACL (total ACL) is 170,278 lb (77,237 kg), round weight.

* * * * *

(z) *Blueline tilefish*—(1) *Commercial sector.* (i) If commercial landings for blueline tilefish, as estimated by the SRD, reach or are projected to reach the applicable ACL in paragraph (z)(1)(iii) of this section, the AA will file a notification with the Office of the Federal Register to close the commercial sector for the remainder of the fishing year. On and after the effective date of such a notification, all sale or purchase of blueline tilefish is prohibited and harvest or possession of this species in or from the South Atlantic EEZ is limited to the bag and possession limit. This bag and possession limit applies in the South Atlantic on board a vessel for which a valid Federal commercial or charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, without regard to where such species were harvested, *i.e.*, in state or Federal waters.

(ii) If commercial landings exceed the ACL, and the combined commercial and recreational ACL (total ACL) specified in paragraph (z)(3) of this section is exceeded, and blueline tilefish are overfished, based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year to reduce the commercial ACL for that following year by the amount of the commercial ACL overage in the prior fishing year.

(iii) The applicable commercial ACLs, in round weight, are 17,841 lb (8,093 kg) for 2015, 26,766 lb (12,141 kg) for 2016, 35,785 lb (16,232 kg) for 2017, and 44,048 lb (19,980 kg) for 2018 and subsequent fishing years. The commercial ACL will not increase automatically in a subsequent fishing year if landings exceed or are projected to exceed the total ACL in the prior fishing year, as specified in paragraph (z)(3) of this section.

(2) *Recreational sector.* (i) If recreational landings for blueline tilefish, as estimated by the SRD, are projected to reach the applicable ACL in paragraph (z)(2)(iii) of this section, the AA will file a notification with the Office of the Federal Register to close the recreational sector for the remainder of the fishing year, unless the RA determines that no closure is necessary based on the best scientific information available. On and after the effective date of such a notification, the bag and possession limit is zero.

(ii) If recreational landings for blueline tilefish, exceed the applicable recreational ACL, and the combined commercial and recreational ACL (total ACL) specified in paragraph (z)(3) of this section, is exceeded, and blueline tilefish is overfished, based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register, to reduce the length of the recreational fishing season in the following fishing year to ensure recreational landings do not exceed the recreational ACL the following fishing year. When NMFS reduces the length of the following recreational fishing season and closes the recreational sector, the following closure provisions apply: the bag and possession limit for blueline tilefish in or from the South Atlantic EEZ is zero. Additionally, the recreational ACL will be reduced by the amount of the recreational ACL overage in the prior fishing year. The fishing season and recreational ACL will not be reduced if the RA determines, using the best scientific information available that no reduction is necessary.

(iii) The applicable recreational ACLs, in round weight, are 17,791 lb (8,070 kg) for 2015, 26,691 lb (12,107 kg) for 2016, 35,685 lb (16,186 kg) for 2017, and 43,925 lb (19,924 kg) for 2018 and subsequent fishing years. The recreational ACL will not increase automatically in a subsequent fishing year if landings exceed or are projected to exceed the total ACL in the prior fishing year, as specified in paragraph (z)(3) of this section.

(3) Without regard to overfished status, if the combined commercial and recreational ACL (total ACL), as estimated by the SRD, is exceeded in a fishing year, then during the following fishing year, an automatic increase will not be applied to the commercial and recreational ACLs. The RA will evaluate the landings data, using the best scientific information available, to determine whether or not an increase in the commercial and recreational ACLs will be applied. The applicable combined commercial and recreational sector ACLs (total ACLs), in round weight are 35,632 lb (16,162 kg) for 2015, 53,457 lb (24,248 kg) for 2016, 71,469 lb (32,418 kg) for 2017, and 87,974 lb (39,904 kg) for 2018 and subsequent fishing years.
