

store, or dispose of hazardous waste to comply with standards established by EPA that are to protect the environment. Section 3005 provides for implementation of these standards under permits issued to owners and operators by EPA or authorized States. Section 3005 also allows owners and operators of facilities in existence when the regulations came into effect to comply with applicable notice requirements to operate until a permit is issued or denied. This statutory authorization to operate prior to permit determination is commonly known as "interim status." Owners and operators of interim status facilities also must comply with standards set under Section 3004.

This ICR examines the ground-water monitoring standards for permitted and interim status facilities at 40 CFR parts 264 and 265, as specified. The ground-water monitoring requirements for regulated units follow a tiered approach whereby releases of hazardous contaminants are first detected (detection monitoring), then confirmed (compliance monitoring), and if necessary, are required to be cleaned up (corrective action). Each of these tiers requires collection and analysis of ground-water samples. Owners or operators that conduct ground-water monitoring are required to report information to the oversight agencies on releases of contaminants and to maintain records of ground-water monitoring data at their facilities. The goal of the ground-water monitoring program is to prevent and quickly detect releases of hazardous contaminants to groundwater, and to establish a program whereby any contamination is expeditiously cleaned up as necessary to protect human health and environment.
