II. Background

The NRC is issuing this draft RIS to inform addressees of considerations for

licensing HBF in dry storage and transportation. When evaluating HBF dry storage and transportation applications, the effects of radial hydrides and creep strain on the cladding must be taken into consideration. The purpose of this RIS is to provide information on some approaches acceptable to the NRC for demonstrating compliance with regulations in applications for issuance of dry storage cask CoCs, ISFSI licenses, and CoCs for transportation packages involving HBF.

The NRC issues RISs to communicate with stakeholders on a broad range of matters. This may include communicating staff technical positions on matters that have not been communicated to or are not broadly understood by the nuclear industry; such is the case with this RIS.

Proposed Action

The NRC is requesting public comments on the draft RIS. The NRC staff will make a final determination regarding issuance of the RIS after it considers any public comments received in response to this request.

Dated at Rockville, Maryland, this 20th day of February 2015.

Director, Division of Spent Fuel Management, Office of Nuclear Material Safety and Safeguards.

Impact of Variation in Environmental Conditions on the Thermal Performance of Dry Storage Casks

AGENCY: Nuclear Regulatory Commission.

ACTION: Draft NUREG; request for comment.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is issuing for public comment a draft NUREG, NUREG–2174, “Impact of Variation in Environmental Conditions on the Thermal Performance of Dry Storage Casks.” This report evaluates spent fuel dry storage cask thermal impact of varying environmental conditions and transient thermal behavior when subjected to a sudden boundary condition change. Different cask designs are evaluated (vertical underground, vertical aboveground, and horizontal aboveground). The NRC staff will

consider the analysis results in this report when performing technical reviews, applicants should consider them when applying for cask certification. These results can be used as additional guidance when considering the thermal impact of the environmental factors in the thermal performance of dry storage systems.
