

b. Interest Rate Spread

Currently, the FR 2420 report does not have an “interest rate spread” reporting field. Without this field, the underlying value of the reference rate and spread components cannot be determined with certainty. Accordingly, the Board proposes to add an “interest rate spread” field to the FR 2420 report. This new reporting field will enable calculation of the value of the underlying reference rate without looking up the reference rate in an additional data source. This field would be labelled ‘NA’ for fixed-rate CDs.

c. Option Identifiers and Step-Up Indicator

The Board proposes to add report fields to the FR 2420 that would identify CDs with embedded options as well as CDs and time deposits with rates that change over the term of the CD. CDs with options are becoming an increasingly important financial instrument with growing issuance, particularly in products with options to extend the maturity date. One additional data field would need to be added to identify instruments with embedded options. In addition, experience with the current data suggests that there is also a segment of the CD market with rates that rise or “step up” over the course of the instrument’s life. An additional field would be necessary to identify these transactions. These fields could be particularly important for informing the use of CD rates in the calculation of reference rates, as options affect the comparability of instruments to others with the same stated maturity dates.

- CDs with embedded options would be identified under the proposal with an additional field that would capture the type of option, specifically ‘callable,’ ‘puttable,’ ‘extendable,’ and ‘other,’ or indicate ‘NA’ for CDs without embedded options.

- Rates that will rise or fall over the life of the time deposit or CD based on a pre-arranged agreement would be identified under the proposal with an additional field that would be a ‘Y’ or ‘N’ step-up indicator.
