

environmental factors associated with foodborne illness and outbreaks.

Environmental factors associated with foodborne illness include both food safety practices (e.g., inadequate cleaning practices) and the factors in the environment associated with those practices (e.g., worker and retail food establishment characteristics). To understand these factors, we need to continue to collect data from those who prepare food (i.e., food workers) and on the environments in which the food is prepared (i.e., retail food establishment kitchens). Thus, data collection methods for this generic package include: (1) manager and worker interviews/assessments, and (2) observation of kitchen environments. Both methods allow data collection on food safety practices and environmental factors associated with those practices.

For each data collection, we will collect data in approximately 47 retail

food establishments per site. Thus, there will be approximately 376 establishments per data collection (an estimated 8 sites X 47 establishments). We expect a manager/establishment response rate of approximately 60 percent; thus, we will need to attempt to recruit 627 managers/establishments via telephone in order to meet our goal of 376 establishments. Each manager will respond to the recruiting script only once for approximately three minutes. Thus, the maximum burden for the manager recruiting attempts will be 31 hours. We will collect interview/assessment data from a manager in each establishment. Each manager will respond only once for approximately 30 minutes. Thus, the maximum burden for the manager interview/assessment will be 188. In total, the average burden for managers will be 219 hours (31 hours for recruiting plus 188 hours for the interview/assessment).

For each data collection, we will recruit a worker from each participating establishment to provide interview/assessment data. Each worker will respond to the recruiting script only once for approximately three minutes. Thus, the maximum burden for the worker recruiting attempts will be 19 hours. We expect a worker response rate of 90 percent (339 workers). Each worker will respond only once for approximately 10 minutes. Thus, the maximum burden for the worker interview/assessment will be 57 hours. In total, the average burden per worker response will be 88 hours (19 hours for recruiting plus 57 hours for the interview/assessment).

There is no cost to respondents other than their time. The total estimated annual burden for each data collection will be 295 hours.
