

above-ground transmission line; (9) three proposed single phased transformers; and (10) appurtenant facilities. On average, the project would generate approximately 2,800 megawatt-hours annually. The applicant proposes to remove a non-operating sluice gate on the spillway, rehabilitate the powerhouse, and operate the project in a run-of-river mode.

m. Due to the project works already existing and the limited scope of proposed rehabilitation of the project site described above, the applicant's close coordination with federal and state agencies during the preparation of the application, completed studies during pre-filing consultation, and agency recommended preliminary terms and conditions, we intend to waive scoping and expedite the exemption process. Based on a review of the application, resource agency consultation letters including the preliminary 30(c) terms and conditions, and comments filed to date, Commission staff intends to prepare a single environmental assessment (EA). Commission staff determined that the issues that need to be addressed in its EA have been adequately identified during the pre-filing period, which included a public meeting and site visit, and no new issues are likely to be identified through additional scoping. The EA will consider assessing the potential effects of project construction and operation on aquatic, terrestrial, threatened and endangered species, recreation and land use, aesthetic, and cultural and historic resources.
