k. *Description of Request:* The licensee requests an extension of a previous temporary variance of the minimum flow requirements in the Eel River and East Branch Russian River. On June 18, 2015, the Commission issued an order approving a temporary variance of the minimum flow requirements in the Eel River below Scott Dam (gage E-2), the Eel River below Cape Horn Dam (gage E-11), and East Branch Russian River (gage E-16). Specifically, the order granted the licensee's request to operate under a dry water year scenario through December 1, 2015, in order to preserve limited water resources during the current drought. In its November 10, 2015 request, the licensee states that the project reservoir (Lake Pillsbury) is projected to drain by mid-January. Consequently, the licensee requests Commission approval to operate as low as the critically dry year minimum flow requirements in the Eel River below Scott Dam (20 cubic feet per second (cfs) release) and the East Branch Russian River (5 cfs release) and the exceptionally low minimum flow requirements in the Eel River below Cape Horn Dam (9 cfs release) in order to preserve water storage. In addition, the licensee requests Commission approval for a modified minimum flow compliance criteria of a 24-hour average, rather than an instantaneous requirement. The licensee requests the temporary variance through January 31, 2016, or when storage in Lake Pillsbury reaches 27,000 acre-feet, whichever comes first.
