SUPPLEMENTARY INFORMATION:

Technology description follows.

Title of invention: A Novel Fully-Human Anti-CD30 Chimeric Antigen Receptor for Treatment of CD30+ Lymphoma.

Description of Technology: Chimeric antigen receptors (CARs) are hybrid proteins that consist of two major components: A targeting domain and a signaling domain. The targeting domain allows T cells which express the CAR to selectively recognize and bind to diseased cells that express a particular protein. Once the diseased cell is bound by the targeting domain of the CAR, the signaling domain of the CAR activates the T cell, thereby allowing it to kill the diseased cell. This is a promising new therapeutic approach known as adoptive cell therapy (ACT).

Researchers at the National Cancer Institute's Experimental Transplantation and Immunology Branch developed a CAR that recognizes human tumor necrosis factor receptor superfamily member 8 (TNFRSF8, also known as CD30). The expression of CD30 is deregulated in a variety of human cancers, including many lymphomas. By creating a CAR that recognizes CD30, it may be possible to treat these cancers using adoptive cell therapy.

Potential Commercial Applications

—Treatment of human cancers associated with expression of CD30 or variants thereof

—Specific cancers include: Non-Hodgkins Lymphomas, Hodgkin's Lymphomas, several solid malignancies

Value Proposition

—Human components are less likely to cause adverse or neutralizing immune response in patients

—Targeted therapies decrease non-specific killing of healthy cells and tissues, resulting in fewer off-target side-effects and healthier patients

Development Stage

In vivo/Lead Validation.
