

of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*) and the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR parts 222–226).

The applicant requests a five-year permit to locate and describe surface-pelagic drift communities of the Atlantic Ocean and Gulf of Mexico that serve as developmental habitat for surface-pelagic juvenile and neonate sea turtles, to quantify threats to pelagic sea turtles, and to gather information on their life-history, genetics, movements, behavior, and diet. Researchers would conduct vessel surveys to count and pursue for capture by dip net up to 300 loggerhead, 200 green, 60 hawksbill, 130 Kemp's ridley and 10 leatherback sea turtles annually. An additional 150 loggerheads and 440 leatherbacks could be harassed annually during vessel surveys but would not be pursued for capture. Depending on life stage and size, captured sea turtles would have the following procedures performed prior to release: Measure, weigh, oral swab, esophageal lavage, skin and scute biopsy, flipper and passive integrated transponder tag, and/or epoxy attachment of a satellite or VHF transmitter. Voided fecal samples also would be collected opportunistically.
