

ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondents	Form name	Number of respondents	Number of responses per respondent	Average burden per response (in hrs.)
Girls 14–18 years old Intervention Group	Enrollment Questions	1,200	1	5/60
	Baseline Survey	600	1	15/60
	3-Month Survey	480	1	10/60
	6-Month Survey	384	1	15/60
Control Group	Baseline Survey	600	1	15/60
	3-Month Survey	480	1	10/60
	6-Month Survey	384	1	15/60

Leroy A. Richardson,

Chief, Information Collection Review Office,
Office of Scientific Integrity, Office of the
Associate Director for Science, Office of the
Director, Centers for Disease Control and
Prevention.

[FR Doc. 2016–00866 Filed 1–15–16; 8:45 am]

BILLING CODE 4163–18–P

**DEPARTMENT OF HEALTH AND
HUMAN SERVICES**

**Centers for Disease Control and
Prevention**

[Docket Number CDC–2016–0002; NIOSH–
214]

**Request for Information on NIOSH
Center for Direct Reading and Sensor
Technologies: Sensors for Emergency
Response Activities**

AGENCY: National Institute for
Occupational Safety and Health
(NIOSH) of the Centers for Disease
Control and Prevention (CDC),
Department of Health and Human
Services (HHS).

ACTION: Request for information (RFI)
and comment.

SUMMARY: The National Institute for
Occupational Safety and Health
(NIOSH), part of the Centers for Disease
Control and Prevention (CDC), requests
information to enhance the value of the
NIOSH Center for Direct Reading and
Sensor Technologies and is seeking
input regarding specific issues on the
availability, capability, suitability,
barriers, limitations, and opportunities
for current or future direct reading
devices and sensor technologies that can
be utilized for emergency response. This
RFI is intended to inform the planning
of a document to evaluate current and
future sensor technologies used in
emergency response.

- DATES:
- ADDRESSES:
- INSTRUCTIONS:
- FOR FURTHER INFORMATION:

• **BACKGROUND:**

• **INFORMATION NEEDS:**

DATES: Electronic or written comments
should be received on or before March
21, 2016.

ADDRESSES: You may submit comments
identified by CDC–2016–0002 and
Docket Number NIOSH–214 by any of
the following methods:

• *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the
instructions for submitting comments.

• *Mail:* National Institute for
Occupational Safety and Health, NIOSH
Docket Office, 1090 Tusculum Avenue,
MS C–34, Cincinnati, OH 45226–1998.

Instructions: All information received
in response to this notice must include
the agency name and docket number
(CDC–2016–0002; NIOSH–214). All
relevant comments received will be
posted without change to
www.regulations.gov, including any
personal information provided. For
access to the docket to read background
documents or comments received, go to
www.regulations.gov. All information
received in response to this notice will
also be available for public examination
and copying at the NIOSH Docket
Office, 1150 Tusculum Avenue, Room
155, Cincinnati, OH 45226.

FOR FURTHER INFORMATION CONTACT:

D. Gayle DeBord, NIOSH, Division of
Applied Research and Technologies,
Robert A. Taft Laboratories, 1090
Tusculum Avenue, MS–R2, Cincinnati,
Ohio 45226, Phone: (513) 841–4256 [not
a toll-free number], Email: GDeBord@cdc.gov.

Background: The NIOSH Center for
Direct Reading and Sensor Technologies
([http://www.cdc.gov/niosh/topics/drst/
default.html](http://www.cdc.gov/niosh/topics/drst/default.html)) was created in May 2014
to coordinate the development of
recommendations on the use of these
21st century technologies in
occupational safety and health. The
mission of the Center is to develop a
national research agenda, provide
guidance on the selection of sensors and
direct-reading monitors and guidance
for validation, quality control and

training. Within the overall scope of its
activities, the Center plans to develop a
document to evaluate current and future
sensor technologies used in emergency
response.

Information Needs: Specifically,
emergency responders are increasingly
relying on direct-reading instruments
and other sensor technologies to rapidly
evaluate potentially life-threatening
hazards and exposures.

Recommendations to support the proper
selection, use, validation, calibration
and interpretation of these technologies
are lacking. The use of new generations
of sensors has increased exponentially
in the past few years. While other
Federal agencies and organizations have
developed some recommendations on
this topic, newer sensor technologies
have not been thoroughly evaluated and
guidance has not focused on
interpretation of data or appropriate for
the intended purpose. Other factors that
need to be considered are that multiple
strategies of environmental sampling
will be necessary in any response effort;
and that an understanding of the
advantages and limitations of newer
direct-reading and sensor technologies
is needed to select the appropriate
strategies. Additionally, training for
these new sensor technologies and
environmental sampling strategies may
be lacking.

The National Institute for
Occupational Safety and Health seeks
public comments in response to the
following questions. Please feel free to
comment on any or all of the questions
below:

**A. Utilization of Sensors in Emergency
Response**

A1. What sensors have the most
immediate impact on emergency
response?

A2. What applications/situations such
as determination of the need for
evacuation, use of personal protective
equipment, or end-of-service-life of
protective equipment are particularly in
need of sensors?

A3. What are some advantages of newer generation sensors or direct reading devices for emergency response?

A4. Could wearable or embedded sensors have a major contribution? How?

A5. What are the primary stumbling blocks that impede sensor development and commercialization (e.g., reliability, potential market size, investment capital, etc.)?

B. Standards and Guidance

B1. What existing standards or guidance are available with respect to sensor performance characteristics and validation of sensors?

B2. What standards need to be developed (for performance or manufacturing) to meet industry and emergency responder expectations for emerging sensor technologies?

B3. What guidance is needed with respect to sensors used in emergency response?

C. Training

C1. What training is available on when and how to use sensors in emergency response? Who is developing this training and how is it accessed (print, via web, etc.)?

C2. What additional training on sensors would be useful for emergency response?

C3. What standards or guidance are available on how training should be developed and conducted?

D. Sensors

D1. What capabilities would be highest priority for emergency response efforts? What are the current primary gaps in sensor functionality?

D2. What are the largest technical challenges in manufacturing facing sensor development (e.g., integration, reliability)?

D3. What are the new tools for integration/engineering (e.g., Wi-Fi, programmable logic, signal processing software, GPS/location services, development of multi-sensor networks, etc.) that will have the greatest impact on sensors used in emergency response?

D4. What, if any, unique emergency response issues might be expected for sensor manufacturing?

D5. What sample types have you used to demonstrate sensor performance (e.g., real clinical samples, environmental samples/sites)?

D6. What procedures for standardized testing have you used to develop sensors?

D7. What would aid the sensor development community?

E. Additional Considerations

E1. What additional questions and considerations should be considered relevant to planning the development of a document to evaluate current and future sensor technologies used in emergency response?

E2. What elements of the sensor lifecycle are either missing, in need of clarification, or of greatest importance?

Responses to this notice are not offers and cannot be accepted by the Government to form a binding contract or to issue a grant. Information obtained as a result of this RFI may be used by the government for program planning on a non-attribution basis. Please do not include any information that might be considered proprietary, confidential, or personally identifying (such as home address or social security number).

Dated: January 12, 2016.

John Howard,

Director, National Institute for Occupational Safety and Health, Centers for Disease Control and Prevention.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

[30Day-16-16CP]

Agency Forms Undergoing Paperwork Reduction Act Review

The Centers for Disease Control and Prevention (CDC) has submitted the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The notice for the proposed information collection is published to obtain comments from the public and affected agencies.

Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address any of the following: (a) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) Enhance the quality, utility, and clarity of the information to be collected; (d) Minimize the burden of

the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses; and (e) Assess information collection costs.

To request additional information on the proposed project or to obtain a copy of the information collection plan and instruments, call (404) 639-7570 or send an email to omb@cdc.gov. Written comments and/or suggestions regarding the items contained in this notice should be directed to the Attention: CDC Desk Officer, Office of Management and Budget, Washington, DC 20503 or by fax to (202) 395-5806. Written comments should be received within 30 days of this notice.

Proposed Project

Community-based tick control for the prevention of Rocky Mountain spotted fever in Hermosillo, Mexico—New—National Center for Emerging and Zoonotic Diseases (NCEZID), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

The Centers for Disease Control and Prevention (CDC) Rickettsial Zoonoses Branch (RZB) requests approval of a public health intervention assessment tool to demonstrate the efficacy and impact of public health research related to the prevention of Rocky Mountain spotted fever [RMSF] in Hermosillo, Mexico. These activities include monitoring cases, conducting tick control interventions, and performing participant surveys to assess the knowledge, attitudes, and practices relating to tick control and prevention.

The information collection for which approval is sought is in accordance with RZB's mission to reduce morbidity and mortality of rickettsial diseases and decrease the burden of disease through control and prevention methods. Authorizing Legislation comes from Section 301 of the Public Health Service Act (42 U.S.C. 241).

Approval of this data collection tool will allow RZB to collect information related to risk of RMSF to improve and inform prevention activities. Successful execution of RZB's public health mission requires the use of data collection activities in collaboration with multiple local and international partners. RZB proposes the use of pre/posttests to evaluate the changes in knowledge, attitudes, and practices relating to tick control as well as perceived impact of the intervention project. The project will collect basic
