

quarter progress reports. Data on HIV/HCV testing and hepatitis vaccination are reported only in the aggregate (e. g. numbers tested and percent of tests that were positive). No individual-level information is collected through this instrument.

The Indirect Services Outcomes Data Tool collects annual data on community-level outcome measures. These data typically come from existing sources such as ongoing community surveys and administrative data collected by local agencies and institutions such as law enforcement, school districts, college campuses, hospitals, and health departments. The data are submitted to SAMHSA in the form of community-level averages, percentages, or rates, and are used to assess the grantees' success in changing community norms, policies, practices, and systems through environmental strategies and information dissemination activities. As with the

QPR, no individual-level information is collected through this instrument.

The third data collection instrument for which approval is being sought is intended to collect FY 2015 data on the HIV testing activities of the grantees. It will be used once only, immediately after the system goes online, in order to collect data for two of the seven HHS Core Indicators that SAMHSA/CSAP has agreed to report. Although this statement refers to it as a separate instrument for purposes of clarity in burden estimation, it has the same data fields as the HIV Testing

Implementation section of the main Quarterly Progress Report tool and differs only in its reporting timeframe

Although the main purpose of this data collection effort is to provide a standard and efficient system for SAMHSA's project officers to maintain a feedback loop with the grantees that they manage and to respond to training and technical assistance needs in a timely fashion, the data will also be

incorporated into the national cross-site evaluation. By combining this grantee-level implementation information and community-level outcome data with participant-level pre-post data, SAMHSA will be able to identify interventions and intervention combinations that produce the most favorable outcomes at the individual and community levels, and to investigate the interaction between participant- and grantee-level factors in predicting positive outcomes.

Respondent burden has been limited to the extent possible while allowing SAMHSA project officers to effectively manage, monitor, and provide sufficient guidance to their grantees, and for the cross-site evaluation to reliably assess program outcomes and successful strategies. The following table displays estimates of the annualized burden for data collected through the Quarterly Progress Reporting and Indirect Services outcomes data collection tools.

ESTIMATES OF ANNUALIZED HOUR BURDEN BY INSTRUMENT

Type of respondent activity	Number of respondents	Responses per respondent	Total responses	Hours per response	Total burden hours
Quarterly Progress Report	158	4	632	4	2,528
Indirect Services Outcomes	158	1	158	2	316
HIV Testing Retrospective Reporting Tool	50	1/3	16. 67	0. 25	4. 17
Total	158		806. 67		2,848
