

currently available. CD6 is a potent monoclonal antibody against N1 subtypes of NA that inhibits the enzymatic activity of the NA protein, including NA variants resistant to NA inhibitors. In a murine model of infection, a single dose of antibody was protective against lethal challenge with H1N1 influenza virus. The CD6 antibody can potentially be used in combination with other antibodies in an antibody “cocktail” or in conjunction with other therapeutic agents. Additionally, this unique anti-NA antibody may be useful in combination with known neutralizing anti-hemagglutinin (HA) antibodies.

Potential Commercial Applications

- Prophylactic and therapeutic against influenza virus infections;
- Diagnostic tests for influenza virus infections; and
- Reagent to measure the potency of H1N1 NA in influenza virus vaccines.

Competitive Advantages

- Monoclonal antibody demonstrated to be effective against circulating H1N1 influenza viruses;
- Monoclonal antibody binds a novel, conserved epitope spanning NA dimers; and
- Monoclonal antibody is well-suited for an antibody cocktail that includes anti-HA antibodies.

SUMMARY: The Food and Drug Administration, in cosponsorship with the Pharmaceutical Users Software Exchange (PhUSE) is announcing a public conference entitled “The FDA/PhUSE Annual Computational Science Symposium.” The purpose of the conference is to help the broader community align and share experiences to advance computational science. At the conference, which will bring together FDA, industry, and academia, FDA will update participants on current initiatives, and collaborative project groups will address specific challenges in accessing and reviewing data to support product development. These project groups will focus on solutions and practical ways to implement them.

DATES: The meeting will be held on March 13, 2016, from 3 p.m. to 7 p.m., and March 14 to 15, 2016, from 9 a.m. to 5:30 p.m.

SUPPLEMENTARY INFORMATION:

I. Background

Since 2008, the Office of Computational Science (formerly the Computational Science Center) of FDA’s Center for Drug Evaluation and Research (CDER) has supported CDER’s scientific community by offering innovative solutions that improve the scientific drug review process by integrating data, tools, services, and training. Since the first Computational Science Symposium four years ago, FDA has played an important part in the development and ongoing support of the conference and the associated PhUSE Computational Science Working Groups. The PhUSE Collaboration was formed to bring together experts from industry, FDA and other regulatory agencies, academia, and

technology providers in specific areas to collaborate on computational science, describe best practices in challenging areas, and propose methods for addressing knowledge gaps. A description of the project groups and planned activities can be found at <http://www.phuse.eu/css.aspx>.
