

extension which meets applicable gear requirements. All fishing would occur north of the Summer Flounder Fishery Sea Turtle Exemption Area (37°05' N latitude), in waters where approved TEDs are not required, and no Endangered Species Act (ESA) research permit would be required.

Eighty tows would be conducted between March and October 2016, in southern New England and mid-Atlantic waters. A trawl net with the modified TED would be compared against a control net of the vessels' standard bottom trawl gear. Paired tows would be conducted across multiple strata with trawl times of 60–90 minutes. Data collected on total catch would include total weight and length measurements on all summer flounder. Other landed species will be sampled if conditions permit, or a representative subsample will be taken. Underwater camera equipment would be installed in the net to investigate the performance of the cable TED, the fishing gear, and any potential problems in the rigging of the TED. All participating vessels would have permits and quota to target summer flounder, which would be kept and sold consistent with applicable regulations. All bycatch would be returned to the sea as soon as practicable following data collection.

If approved, the applicant may request minor modifications and extensions to the EFP throughout the year. EFP modifications and extensions may be granted without further notice if they are deemed essential to facilitate completion of the proposed research and have minimal impacts that do not change the scope or impact of the initially approved EFP request. Any fishing activity conducted outside the scope of the exempted fishing activity would be prohibited.
