**SUPPLEMENTARY INFORMATION:**

#### I. Background

A program for regular cleanup and removal of accumulations of coal and float coal dusts, loose coal, and other combustibles is essential to protect miners from explosions. Effective and frequent rock dust application is necessary to protect miners from the potential of a float coal dust explosion or, if one occurs, to reduce its propagation. Section 75.400-2 requires that mine operators establish and maintain a "program for regular cleanup and removal of accumulations of coal and float coal dusts, loose coal, and other combustibles." In addition, the cleanup program must be available to the Secretary or authorized representative.

#### SUPPLEMENTARY INFORMATION:

##### I. Background

Continuous Personal Dust Monitors (CPDMs) determine the concentration of

respirable dust in coal mines. CPDMs must be designed and constructed for coal miners to wear and operate without impeding their ability to perform their work safely and effectively, and must be durable to perform reliably in normal working conditions of coal mines. Paperwork requirements imposed on applicants are related to the application process and CPDM testing procedures.
