SUPPLEMENTARY INFORMATION:

I. Abstract

The primary objective of the National Coal Resources Data System (NCRDS) is to advance the understanding of the energy endowment of the United States (U.S.) by gathering and organizing digital geologic information related to coal, coal bed gas, shale gas, conventional and unconventional oil and gas, geothermal, and other energy resources and related information regarding these resources, along with environmental impacts from using these resources. These data are needed to support regional or national assessments concerning energy resources. Requesting external cooperation is a way for NCRDS to collect energy data and perform research and analyses on the characterization of geologic material, and obtain other information (including geophysical or seismic data, sample collection for generation of thermal maturity data) that can be used in energy resource assessments and related studies.

The USGS will issue a call for proposals to support researchers from State Geological Surveys and associated accredited state universities that can provide geologic data to support NCRDS and other energy assessment projects being conducted by the USGS.

Data submitted to NCRDS by external cooperators constitute more than two-thirds of the USGS point-source stratigraphic database (USTRAT) on coal occurrence. In 2015, NCRDS supported 21 projects in 19 States. This program is conducted under various authorities, including 30 U.S.C. 208-1, 42 U.S.C. 15801, and 43 U.S.C. 31 *et seq.* This collection will consist of applications, proposals and reports (annual and final).
