FERC-714 [Annual Electric Balancing Authority Area and Planning Area Report]¹

OMB Control No.: 1902-0140.

Abstract: The Commission uses the FERC-714 data to analyze power system operations. These analyses estimate the effect of changes in power system operations resulting from the installation of a new generating unit or plant, transmission facilities, energy transfers between systems, and/or new points of interconnections. The FERC-714 data assists in providing a broad picture of interconnected balancing

authority area operations including comprehensive information of balancing authority area generation, actual and scheduled inter-balancing authority area power transfers, and net energy for load, summer and winter generation peaks and system lambda. The Commission also uses the data to prepare status reports on the electric utility industry including a review of inter-balancing authority area bulk power trade information.

The Commission uses the collected data from planning areas to monitor forecasted demands by electric utilities with fundamental demand responsibilities and to develop hourly demand characteristics.

Type of Respondent: Electric utility balancing authorities and planning areas in the United States.

Estimate of Annual Burden: The Commission estimates the annual public reporting burden and cost² (rounded) for the information collection as follows:

FERC-714 (ANNUAL ELECTRIC BALANCING AUTHORITY AREA AND PLANNING AREA REPORT)

Number of respondents (1)	Annual number of responses per respondent (2)	Total number of responses (1) * (2) = (3)	Average burden & cost per response ³ (4)	Total annual burden hours & total annual cost (3) * (4) = (5)	Cost per respondent (\$) (5) ÷ (1)

FERC-730 [Report of Transmission Investment Activity]

OMB Control No.: 1902-0239.

Abstract: Pursuant to Section 219⁴ of the Federal Power Act, the Commission issued FERC Order No. 679,⁵ Promoting Transmission Investment Through Pricing Reform. In Order No. 679 FERC amended its regulations in 18 CFR 35.35 to establish incentive-based (including performance-based) rate treatments for the transmission of electric energy in interstate commerce by public utilities. The Commission intended the order to benefit consumers by ensuring reliability and to reduce the cost of delivered power by reducing

transmission congestion. Order No. 679 also adopted an annual reporting requirement (FERC-730) for utilities that receive incentive rate treatment for specific transmission projects. The FERC-730 provides annual data on transmission capital expenditures as well as project status detail. The Commission requires that filers specify which projects are currently receiving incentives in the project detail table and that they group together those facilities receiving the same incentive. Specifically, in accordance with the statute, public utilities with incentive rates must file:

- Actual transmission investment for the most recent calendar year, and projected, incremental investments for the next five calendar years (in dollar terms); and

- a project by project listing that specifies for each project the most up to date, expected completion date, percentage completion as of the date of filing, and reasons for delays for all current and projected investments over the next five calendar years. Projects with projected costs less than \$20 million are excluded from this listing.

To ensure that Commission rules are successfully meeting the objectives of Section 219, the Commission collects

¹ The renewal request in this IC docket is for the current FERC-714, with no change to the reporting requirements. The FERC-714 is also part of the Forms Refresh effort (started in Docket No. AD15-11), which is a separate activity.

² The hourly cost (wages plus benefits), is based on the Bureau of Labor Statistics May 2014 National Industry-Specific Occupational Employment and Wage Estimates (at http://www.bls.gov/oes/current/naics2_22.htm). The average hourly cost (wages plus benefits) of \$68.66/hour is the average of the following:

- Management (Code 11-0000), \$78.04/hr.

- Computer and mathematical (Code 15-0000), \$58.25/hr.
- Electrical Engineers (Code 17-2071), \$66.45/hr.
- Economist (Code 19-3011), \$73.04/hr.
- Computer and Information Systems Managers (Code 11-3021), \$94.55/hr.
- Accountants and Auditors (Code 13-2011), \$51.11/hr.
- Transportation, Storage, and Distribution Managers (Code 11-3071), \$73.65/hr.
- Power Distributors and Dispatchers (Code 51-8012), \$54.16/hr.

³ The estimates for cost per response are derived using the following formula: Average Burden Hours per Response * \$72.00 per Hour = Average Cost per Response. The hourly cost figure comes from the FERC average salary plus benefits (\$149,489/year). Commission staff believes the FERC average salary plus benefits to be representative wage (plus benefits) for industry respondents.

industry data, projections and related information that detail the level of investment. FERC-730 information regarding projected investments as well as information about completed projects allows the Commission to monitor the

success of the transmission pricing reforms and to determine the status of critical projects and reasons for delay.

Type of Respondent: Public utilities that have been granted incentives based rate treatment for specific transmission

projects under the provisions of 18 CFR 35.35(h) must file the FERC-730.

Estimate of Annual Burden: The Commission estimates the annual public reporting burden for the information collection as:

FERC-730 (REPORT OF TRANSMISSION INVESTMENT ACTIVITY)

Number of respondents (1)	Annual number of responses per respondent (2)	Total number of responses (1) * (2) = (3)	Average burden & cost per response ³ (4)	Total annual burden hours & total annual cost (3) * (4) = (5)	Cost per respondent (\$) (5) ÷ (1)

FERC-556, Certification of Qualifying Facility Status for a Small Power Production or Cogeneration Facility

OMB Control No.: 1902-0075.

Abstract: Form No. 556 is required to implement sections 201 and 210 of the Public Utility Regulatory Policies Act of 1978¹ (PURPA). FERC is authorized, under those sections, to encourage cogeneration and small power production and to prescribe such rules as necessary in order to carry out the statutory directives.

A primary statutory objective is efficient use of energy resources and facilities by electric utilities. One means of achieving this goal is to encourage production of electric power by cogeneration facilities which make use of reject heat associated with commercial or industrial processes, and by small power production facilities which use other wastes and renewable resources. PURPA encourages the development of small power production facilities and cogeneration facilities that meet certain technical and corporate
