Abstract: The affected entities are subject to the General Provisions of the

NESHAP at 40 CFR part 63, subpart A, and any changes, or additions to the Provisions specified at 40 CFR part 63, subpart PPPP. Owners or operators of the affected facilities must submit initial notification reports, performance tests, and periodic reports and results. Owners or operators are also required to maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. Reports, at a minimum, are required semiannually.

Form Numbers: None.

Respondents/affected entities: Facilities that perform surface coating of plastic parts and products.

Respondent's obligation to respond: Mandatory (40 CFR part 63, subpart PPPP).

Estimated number of respondents: 835 (total).

Frequency of response: Initially, occasionally and semiannually.

Total estimated burden: 324,000 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$32,800,000 (per year), which includes \$267,000 in both annualized capital/startup and operation & maintenance costs.

Changes in the Estimates: There is an adjustment increase in burden from the most recently approved ICR. This is not due to program changes; rather, the increase occurred because we assume the industry has grown, and will continue to grow, at a rate of one new source per year. This increase in the estimated number of sources results in increases in the respondent labor hours, total O&M costs, and number of responses.

Acting-Director, Collection Strategies Division.

SUPPLEMENTARY INFORMATION:

I. Information About the Project/Document

Water resources in the United States are affected by a number of climate stressors, including increasing temperatures, changing precipitation patterns, and extreme events. These changing conditions have implications for stormwater management as local decision makers look to improve existing infrastructure and build new stormwater systems. EPA and NOAA have conducted a number of workshops and other community efforts in cities and counties within the Chesapeake Bay and Great Lakes regions to initiate conversations about how projected land use and climate change could impact local water conditions and how adaptation (resiliency) planning can fit into decision-making processes to help meet existing goals. These conversations provided insights into the kinds of information that enable and facilitate communities' incorporation of climate

change into local planning and decision making for stormwater management. The report reviews lessons learned from these adaptation planning experiences, including locally identified barriers to addressing climate change, methods to overcome barriers in the short term, and long term information needs to further assist communities in their stormwater adaptation efforts.

Dated: May 9, 2016.

Deputy Director, National Center for Environmental Assessment.
