

SUMMARY: The Department of Commerce, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995.

DATES: Written comments must be submitted on or before August 29, 2016.

ADDRESSES: Direct all written comments to Jennifer Jessup, Departmental Paperwork Clearance Officer, Department of Commerce, Room 6616, 14th and Constitution Avenue NW., Washington, DC 20230 (or via the Internet at Jjessup@doc.gov).

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instrument and instructions should be directed to Christopher Biegel, (503) 231-6291 or christopher.biegel@noaa.gov.

SUPPLEMENTARY INFORMATION:

I. Abstract

This request is for an extension of a currently approved information collection.

The Magnuson-Stevens Fishery Conservation and Management Act requires that the Secretary of Commerce maintain a cost recovery program to cover part of the management, data collection, and enforcement costs of the limited access privilege programs, such as the Pacific coast groundfish fishery's trawl rationalization program. This cost recovery program requires fish sellers to submit fees to fish buyers who then submit those fees to the National Marine Fisheries Service (NMFS) and include information about the volume and value of groundfish. Information is collected from monthly and annual reports as well as non-payment documents when necessary.

This program is authorized under the Pacific coast groundfish fishery regulations, trawl rationalization cost recovery program at 50 CFR 660.115.

II. Method of Collection

Most information is submitted electronically through the Federal web portal Pay.gov, though some may be submitted by mail or email.

III. Data

OMB Control Number: 0648-0663.
Form Number(s): None.

Type of Review: Regular submission (extension of a current information collection).

Affected Public: Business or other for-profit organizations.

Estimated Number of Respondents: 116.

Estimated Time per Response: Cost recovery forms: 1 hour; Failure to pay report: 4 hours; Annual report: 1 hour.

Estimated Total Annual Burden Hours: 1,304.

Estimated Total Annual Cost to Public: \$0 in recordkeeping/reporting costs.

IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

Dated: June 23, 2016.

Sarah Brabson,

NOAA PRA Clearance Officer.

BILLING CODE 3510-22-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648-XE676

Fisheries of the Caribbean, Gulf of Mexico, and South Atlantic; Reef Fish Fishery of Puerto Rico and the U.S. Virgin Islands; Exempted Fishing Permit

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of receipt of an application for an exempted fishing permit; request for comments.

SUMMARY: NMFS announces the receipt of an application for an exempted fishing permit (EFP) from Puerto Rico's Department of Natural and Environmental Resources (PR DNER). If granted, the EFP would authorize the PR DNER to conduct two projects in waters

of the Puerto Rico exclusive economic zone (EEZ) to collect fishery-independent data on the abundance, distribution, and reproductive condition of reef fish in eastern and western Puerto Rico. For the first project, the EFP would authorize the PR DNER to harvest reef fish by hook-and-line and bottom longline gear off both the west and east coasts of Puerto Rico. All reef fish, including undersized and seasonally prohibited reef fish species, would be retained, except for goliath grouper, Nassau grouper, and all species of parrotfish. The purpose of the EFP for the first project is to determine spatial and temporal variations in stock abundance of Caribbean reef fish resources off Puerto Rico.

The second project in the EFP would authorize the PR DNER to collect various species of recreationally important reef fish by spear gun and hook-and-line fishing in Federal waters off the west coast of Puerto Rico. The purpose of the second project is to obtain information about the annual reproductive cycle and minimum size of sexual maturation of the collected reef fish species.

DATES: Comments must be received no later than July 28, 2016.

ADDRESSES: You may submit comments on the application by either of the following methods:

- *Email:* Maria.Lopez@noaa.gov.

Include in the subject line of the email comment the following document identifier: "PR DNER_EFP 2016".

- *Mail:* Maria del Mar Lopez, Southeast Regional Office, NMFS, 263 13th Avenue South, St. Petersburg, FL 33701.

The application and related documents are available for review upon written request to any of the above addresses.

FOR FURTHER INFORMATION CONTACT: Maria del Mar Lopez, telephone: 727-824-5305, email: Maria.Lopez@noaa.gov.

SUPPLEMENTARY INFORMATION: The EFP is requested under the authority of the Magnuson-Stevens Fishery Conservation and Management Act (16 U.S.C. 1801 *et seq.*), and regulations at 50 CFR 600.745(b) concerning exempted fishing.

The proposed collection for scientific research involves activities that would otherwise be prohibited by regulations at 50 CFR part 622, as they pertain to Caribbean reef fish managed by the Caribbean Fishery Management Council (Council). The EFP would exempt this research activity from Federal regulations at § 622.435(a) (Seasonal and

area closures), § 622.436 (Size limits), and § 622.437 (Bag limits).

This action involves activities covered by regulations implementing the Fishery Management Plan for the Reef Fish Fishery of Puerto Rico and the U.S. Virgin Islands. The applicant requests authorization to collect reef fish species through two projects in the Federal waters off the east and west coasts of Puerto Rico. Specimens would be collected by commercial fishermen contracted through the PR DNER, by PR DNER research vessels, and by private vessels contracted by the PR DNER. The applicant has requested the EFP for both projects to be effective from the date of EFP issuance through May 31, 2018.

The first project would continue the collection of information on reef fish abundance and distribution in Federal waters off eastern and western Puerto Rico as part of the ongoing Southeast Area Monitoring and Assessment Program-Caribbean (SEAMAP-C) Reef Fish Monitoring Project that has recently undergone survey protocol revisions. Research in Federal waters would consist of harvesting reef fish at approximately 20 stations in the EEZ off the west coast of Puerto Rico, west of 67°00'00" W. long., and approximately at 10 stations in the EEZ off the east coast of Puerto Rico, from the Fajardo coast to north of Culebra Island and east of Vieques Island. Stations and sampling dates for this first project would be randomly selected. Sampling would be conducted by (1) bottom longline fishing, (2) hook-and-line gear, and (3) underwater cameras to identify and quantify reef fish species. The hook-and-line gear sampling would take place while EFP authorized vessels are both drifting and anchored. Species expected to be caught and landed for the EFP include federally managed schoolmaster, lane, vermilion, yellowtail, mutton, silk, and blackfin snappers; and red hind, coney, graysby, yellowfin, yellowedge, red, tiger, and black groupers. All reef fish, including undersized and seasonally prohibited species, would be retained, except for goliath grouper, Nassau grouper, and all species of parrotfish. The EFP for the first project would allow the following estimated amounts of these species groups to be harvested: A total of 240 lb (108 kg) of red hind grouper, a total of 100 lb (45 kg) of yellowfin, red, tiger, black (Grouper Unit 4) and yellowedge (Part of Grouper Unit 5) groupers, a total of 100 lb (45 kg) of silk, black, blackfin, and vermilion snappers (Snapper Unit 1), and a total of 600 lb (272 kg) of mutton, lane, gray, and schoolmaster snappers (Snapper Unit 3). Harvest of these reef fish species may occur during

their respective spawning seasonal closure periods as described at 50 CFR 622.435. The EFP would allow the harvest of 500 lb (227 kg) of yellowtail snapper, which may include fish under the legal minimum size of 12 in (30.5 cm), total length. Fish collected in the first project would also provide some of the samples to be used in the second project that is part of this EFP request.

The bottom longline fishing component of the first project would occur at randomly selected stations at 0–10, 11–20, and 21–50 fathoms. There would be approximately 20 stations in the EEZ off the west coast and approximately 10 stations in the EEZ off the east coast of Puerto Rico. The sampling stations and dates of sampling would be randomly selected by the PR DNER and may also vary according to weather and sampling logistics. Sampling may occur during closed seasons in Federal waters or in areas closed to certain fishing activities. Sampling in the first project would occur between the hours of 5:30 a.m. and 5:30 p.m., local time. The bottom longline would be anchored at each end, with surface buoys attached to allow retrieval and identification. Circle hooks would be used for the bottom longline gear and the gear would soak for 45 minutes for each sample, after which it would be retrieved and the reef fish collected. The bottom longline would be set to minimize any impacts to bottom habitat by avoiding coral reefs and by fastening small buoys at intervals between hooks to ensure the line remains suspended above the bottom to avoid entanglement. For each bottom longline trip, the following data would be recorded: Date; time of first and last hook deployment and recovery; station code; latitude and longitude; fishing time to the nearest minute; weather conditions; depth; total number of hooked fish per vessel; number, weight, length, reproductive condition, and species level identification of fish by individual longline set; and substrate and/or habitat type.

The hook-and-line sampling for the first project would take place while project vessels are both drifting and anchored. For each hook-and-line samples, sample locations will be selected based on depth and habitat criteria for both the west and east coasts of Puerto Rico. Hook-and-line gear stations would occur at 0–10, 11–20, and 21–50 fathoms. Each sampling area would be sampled twice during the period of the EFP and there would be approximately 20 stations in the Federal waters off the west coast and 10 stations in the Federal waters off the east coast of Puerto Rico. Sampling station and

date of sample would be randomly selected and may also vary according to weather and sampling logistics. The hook-and-line gear sampling for the first project would consist of 2 hours drifting and 2 hours anchored. The hook-and-line sampling to occur while anchored would be conducted for 30 minutes at 4 different sampling stations. The hook-and-line fishing while the vessels are drifting would be conducted in 15-minute intervals near the anchor sampling stations for up to a total of 2 hours per sampling site. For each hook-and-line trip, the following data would be recorded: Date, time of EFP vessel trips; station location (latitude and longitude); fishing time for hook-and-line gear to the nearest 15 minutes; weather conditions; depth; total number of hooked fish per vessel; number, weight, length, reproductive condition, and identification of reef fish per hook-and-line; and stratified habitat type or substrate type.

As part of the first project, a camera survey would be also be used to develop a procedure that would allow for reef fish species identification, counts, and size measurements. There would be a total of approximately 60 camera sampling trips to cover the randomly pre-selected stations for the east and west coasts of Puerto Rico. The camera array would be deployed for 60 minutes at sites near those of the bottom longline fishing sites.

The second project requested as part of this EFP would employ histological methods to describe the annual reproductive cycle and minimum size at maturity of mutton snapper, red hind, coney, white grunt, tomtate, and pluma porgy in waters off the west coast of Puerto Rico. Gonads would be collected from these species and preserved for histological analysis of species by the PR DNER. Information obtained as part of this study would potentially allow for determination of sex, reproductive stage, spawning season, and size of maturity of the collected reef fish species. Sampling for this second project would consist of approximately 10 trips in the Federal waters off the west coast of Puerto Rico. Twice per month, PR DNER contracted fishers would use hook-and-line gear and spear guns to collect a minimum of 25 samples per trip of each of the second project's reef fish species, covering a wide size range of these species. Fishing would be conducted for 6–10 hours on a sampling day. Fish samples would be collected mainly by contracted fishermen. Any other species incidentally caught by hook-and-line fishers would be released, including

Nassau and goliath groupers, and all species of parrotfish.

For this second project, the EFP would allow the collection of a total of 150 lb (68 kg) of red hind during their closed spawning season of December 1 through the last day of February in Caribbean EEZ waters west of 67°10'00" W. long.; and the collection of a total of 150 lb (68 kg) of mutton snapper, which may occur during its seasonal closure, which runs from April 1 through June 30 in the Caribbean EEZ. After being harvested and sampled, all reef fish that were collected would be donated to a local zoo.

The NMFS New Procedures and Actions for Incidental Takes of Marine Mammals in Research and Monitoring Activities policy, approved in 2015, would be followed in the event of any incidental captures of marine mammals. Anchoring in Federal waters to conduct fishing activities would occur up to a maximum of 10 times in areas that do not affect corals. Anchoring and fishing activities would not take place in the spawning aggregation managed areas of Bajo de Sico, Tourmaline, or Abrir La Sierra, west of Puerto Rico.

For both projects of the EFP, samples would be collected aboard research vessels owned by PR DNER and aboard private vessels contracted by the PR DNER. These vessels will be operated by PR DNER personnel or commercial fishermen and/or boat operators under contract with PR DNER. Each research vessel's home port is located in Puerto Rico.

NMFS finds this application warrants further consideration, based on a preliminary review. Possible conditions the agency may impose on this permit, if it is indeed granted, include but are not limited to, a prohibition on conducting research within marine protected areas, marine sanctuaries, or special management zones, without additional authorization. Additionally, NMFS would require any sea turtles taken incidentally during the course of fishing or scientific research activities to be handled with due care to prevent injury to live specimens, observed for activity, and returned to the water. A final decision on issuance of the EFP will depend on NMFS' review of public comments received on the application, consultations with the affected state(s), the Council, and the U.S. Coast Guard, and a determination that it is consistent with all applicable laws.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: June 22, 2016.

Alan D. Risenhoover,

BILLING CODE 3510-22-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Proposed Information Collection; Comment Request; California-Oregon- Washington Coastal Purse Seine Survey.

AGENCY: National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice.

SUMMARY: The Department of Commerce, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995.

DATES: Written comments must be submitted on or before August 29, 2016.

ADDRESSES: Direct all written comments to Jennifer Jessup, Departmental Paperwork Clearance Officer, Department of Commerce, Room 6616, 14th and Constitution Avenue NW., Washington, DC 20230 (or via the Internet at Jjessup@doc.gov).

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instrument and instructions should be directed to James Hilger, (858) 546-7140 or james.hilger@noaa.gov.

SUPPLEMENTARY INFORMATION:

I. Abstract

This request is for a new collection of information.

The Southwest Fisheries Science Center (SWFSC) is undertaking an economics data collection effort for the West Coast Coastal Pelagic Species (CPS) fleet to improve the SWFSC's capability to do the following: (1) Describe and monitor economic performance (*e.g.*, profitability, capacity utilization, efficiency, and productivity) and impacts (*e.g.*, sector, community, or region-specific employment and income); (2) determine the quantity and distribution of net benefits derived from living marine resources; (3) understand and predict the ecological, and behavior of participants in Federally managed commercial fisheries; (4) predict the

biological, ecological, and economic impacts of existing management measures and alternative proposed management actions; and, (4) in general, more effectively conduct the analyses required under the MSA, the Endangered Species Act (ESA), and the Marine Mammal Protection Act (MMPDA), the National Environmental Policy Act (NEP), and Regulatory Flexibility Act (RFA), Executive Order 12866, and other applicable law.

CPS fishery participants are defined as US west-coast purse seine vessels participating in the coastal pelagic species (CPS) fisheries—northern anchovy, Pacific mackerel, Pacific sardine, and/or market squid), we intend to survey all Washington-Oregon-California coastal purse seine vessels with sardine landings in any year between 2015 and the initiation of the survey. This includes vessels fishing off California in the limited entry program under the CPS Fishery Management Plan (FMP) and State permitted vessels fishing off Washington and Oregon.

II. Method of Collection

CPS fishery participants will be contacted and screened to participate in the data collection. A cost and earnings survey will be scheduled and administered to eligible respondents as appropriate. Screener, scheduling and survey modes may include in-person, internet, phone, or mail.

III. Data

OMB Control Number: 0648-xxxx.

Form Number(s): None.

Type of Review: Regular submission (request for a new information collection).

Affected Public: Business or other for-profit organizations.

Estimated Number of Respondents: 100.

Estimated Time per Response: 5 minutes for screener; 5 minutes to schedule survey for qualified and interested respondents; 60 minutes for the survey.

Estimated Total Annual Burden Hours: 95.

Estimated Total Annual Cost to Public: \$0 in recordkeeping/reporting costs.

IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the
