SUPPLEMENTARY INFORMATION:

Background: The NSA is a tenant DoD agency on Fort Meade. NSA is a high-technology communications and data processing organization. In order to meet mission requirements, both at the NSA and within the Intelligence Community, continued integration of the East Campus with the NSA Main Campus on Fort Meade through development of office, operational, and headquarters space is needed. In 2010, NSA completed an EIS that addressed development of facilities on the East Campus. The Record of Decision for the 2010 EIS allowed for initiation of construction currently occurring in the southern portion of the East Campus. This East Campus Integration Program Draft EIS addresses build-out of the northern portion of the East Campus and the adjacent 9800 Troop Support Area, and integration of the East Campus with the NSA Main Campus.

Proposed Action and Alternatives: The East Campus Integration Program was initiated to provide a modern office, operational, and headquarters complex to meet the growth requirements of the NSA and Intelligence Community. Development is proposed along the East Campus central core extending through the NSA Main Campus at Fort Meade.

The Proposed Action consists of the construction of approximately 2,880,000 square feet of office, operational, and headquarters space supporting an increase of 7,200 people with the majority from local leases and government-owned buildings to the NSA Main Campus. The program also includes the demolition of approximately 1,900,000 square feet of buildings and infrastructure. Development would include associated infrastructure (e.g., electrical substation, emergency generator capacity providing 121 megawatts of electricity, life-safety generators, building heating systems, utilities, roads, sidewalks, stormwater management facilities, and parking facilities).

Alternatives identified include four options for emergency power generation and various pollution control systems, two options for building heating systems, four options for locations of parking facilities, and acquisition of additional space at two existing, offsite leased locations. Emergency power generation alternatives are generators and combined generators and combustion turbines. Building heating system alternatives are packaged boilers and a hybrid building heating system consisting of packaged boilers and ground source heat pumps. Parking facility alternatives consist of at least three of the following locations: East Campus Parking Structure 2, Bravo parking lot, N8/N9 parking lot, and Building 9817. Use of multi-level parking facilities were considered in lieu of surface parking. In conjunction with some construction and demolition on the East Campus, lease of space outside of Fort Meade at National Business Park and Annapolis Junction Business Park (Alternatives 1 and 2, respectively) were considered. The No Action Alternative (not undertaking the East Campus Integration Program) is also analyzed in detail.

Summary of Environmental Impacts: The level of environmental impacts potentially resulting from the Proposed Action and alternatives would primarily be dependent on the alternative ultimately selected. Environmental impacts would generally be slightly more adverse for the Proposed Action than for Alternatives 1 and 2 due to the larger building footprints and number of additional personnel associated with the Proposed Action, although facilities and personnel would be consolidated in one location under the Proposed Action.

Generally, construction and demolition would result in some ground disturbance and increased traffic congestion at intersections near the installation and proximal to the build
