Atlantic Coastal Fisheries Cooperative Management Act Provisions; Horseshoe Crabs; Application for Exempted Fishing Permit, 2016

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notification of a proposal to conduct exempted fishing; request for comments.

SUMMARY: The Director, Office of Sustainable Fisheries, has made a preliminary determination that the subject exempted fishing permit (EFP) application submitted by Limuli Laboratories (Limuli) of Cape May Court House, NJ, contains all the required information and warrants further consideration. The application seeks harvest of up to 10,000 horseshoe crabs from the Carl N. Shuster Jr. Horseshoe Crab Reserve (Reserve) for biomedical purposes and requires, as a condition of the EFP, the collection of data related to the status of horseshoe crabs within the reserve. The Atlantic States Marine Fisheries Commission's (Commission) Horseshoe Crab Technical Committee and Delaware Bay Ecosystem Technical Committee were consulted on the scientific merits of the application. The Director has also made a preliminary determination that the activities authorized under the EFP would be consistent with the goals and objectives of the Commission's Horseshoe Crab Interstate Fisheries Management Plan. Therefore, NMFS announces that the Director proposes to recommend that an EFP be issued that would allow up to two commercial fishing vessels to conduct fishing operations that are otherwise restricted by the regulations promulgated under the Atlantic Coastal Fisheries Cooperative Management Act (Atlantic Coastal Act). The EFP would allow for an exemption from the Reserve.

Regulations under the Atlantic Coastal Act require publication of this notification to provide interested parties the opportunity to comment on applications for proposed EFPs.

DATES: Written comments on this action must be received on or before September 12, 2016.

ADDRESSES: You may submit comments on this document, identified by NOAA-NMFS-2016-0113, by either of the following methods:

Electronic Submission: Submit all electronic public comments via the Federal e-Rulemaking Portal. Go to www.regulations.gov/#!docketDetail;D=NOAA-NMFS-2016-0113, Click the "Comment Now!" icon, complete the required fields Enter or attach your comments.

Mail: Written comments should be sent to Chris Wright, Office of Sustainable Fisheries, NMFS, 1315 East-West Highway, Room 13464, Silver Spring, MD 20910. Mark the outside of the envelope "Comments on Horseshoe Crab EFP Proposal."

Fax: Comments may also be sent via fax to (301) 713-0596.

SUPPLEMENTARY INFORMATION:

Background

Limuli submitted an application for an EFP dated April 26, 2016, to collect up to 10,000 horseshoe crabs for biomedical and data collection purposes from the Reserve. Of the collected horseshoe crabs, a portion will be tagged and analyzed for data collection purposes. All collected horseshoe crabs will be returned to the sea after they are bled. The applicant has applied for a similar EFP every year from 2001-2015. Permits were issued each year from 2001-2013, however no harvest and data collection occurred in years 2008, 2009, and 2012. Permits were not issued in 2014 or 2015 due to the pending listing under the Endangered Species Act (ESA) of the rufa red knot (*Calidris canutus rufa*) and ultimate determination as threatened species status under the ESA of 1973 (December 11, 2014; 79 FR 73706) and time needed to consult under the Endangered Species Act with U.S. Fish and Wildlife Service (FWS).

Limuli Laboratories EFP Application

The current EFP application specifies that: (1) The same methods in the 2001-2013 EFPs would be used, (2) at least 15 percent of the bled horseshoe crabs would be tagged, and (3) there had not been any sighting or capture of marine mammals or endangered species in the trawling nets of fishing vessels engaged in the collection of horseshoe crabs since 1993. The project submitted by Limuli would provide morphological data on horseshoe crab catch, would tag a portion of the caught horseshoe crabs, and would use the blood from the caught horseshoe crabs to manufacture Limulus Amebocyte Lysate (LAL), an important health and safety product used for the detection of endotoxins.
